

NEVADA COPPER CORP.
Management's Discussion & Analysis
For the three months ended March 31, 2016

General

This Management's Discussion and Analysis ("MD&A") of Nevada Copper Corp. (the "Corporation" or "Nevada Copper") has been prepared by management as of May 16, 2016 and should be read in conjunction with the Corporation's consolidated financial statements and related notes for the year ended December 31, 2015 which have been prepared in accordance with International Financial Reporting Standards ("GAAP" or "IFRS" as issued by the International Accounting Standards Board ("IASB")). The information contained within this MD&A is current to May 16, 2016.

Unless otherwise noted, comparative financial information contained in this MD&A has been prepared in accordance with IFRS. All amounts are expressed in thousands of US Dollars unless otherwise indicated. Additional information relevant to the Corporation's activities can be found on SEDAR at www.sedar.com.

Description of Business

Nevada Copper Corp. (the "Corporation" or "Nevada Copper") was incorporated on June 16, 1999 under the Business Corporations Act of the Yukon as "African Venture Corporation" and changed its name to "Astron Resources Corporation" on July 26, 1999, and subsequently to Nevada Copper Corp. on November 16, 2006. The Corporation's common shares are listed on the Toronto Stock Exchange ("TSX") under the symbol "NCU". The principal asset of the Corporation is the 100%-owned Pumpkin Hollow copper project ("the Project") located in north-western Nevada, approximately ninety road miles southeast of Reno. The property consists of a contiguous 27 square mile land package comprising private lands, patented and unpatented mineral claims.

Nevada Copper is engaged in the development of the Pumpkin Hollow project. The Project consists of both a fully permitted 6,500 tons/day ("tpd") Stage 1 underground copper mine development and a nearby Stage 2, 70,000 tpd fully permitted open pit project. The Corporation is considering a development consisting of a single large 70,000 tpd concentrator with dual ore feeds ("Integrated Project"), primarily with ore from the North and South open pits, but with supplemental high grade ore from the underground East and E2 deposits. This Integrated Project development was described in a 2015 Integrated Feasibility Study ("IFS"), completed July 9, 2015 and is also fully permitted under State of Nevada regulations. The Project is located entirely on private lands owned or controlled by Nevada Copper. No Federal permits are required for construction or operations.

Highlights of 2015 and 2016 to Date

On April 22, 2016, Nevada Copper filed an amended and restated preliminary short form prospectus (the "Amended Preliminary Prospectus") in connection with a proposed offering (the "Offering") of subscription receipts (the "Subscription Receipts"). Aggregate net proceeds from the Offering will total a minimum of approximately \$5 million which, when combined with proceeds of \$5 million from a convertible loan facility (the "Pala Convertible Loan Facility") with Pala Investments Limited ("Pala"), will satisfy the Corporation's financing requirement pursuant to its amended senior secured loan agreement (the "Red Kite Loan Agreement") with an affiliate of Red Kite Mine Finance ("Red Kite").

Each Subscription Receipt (the "Initial Securities") will entitle the holder to receive one unit of the Corporation (a "Unit"), without payment of additional consideration or further action, upon satisfaction of certain release conditions (the "Release Conditions") as described in the Amended Preliminary Prospectus. Each Unit will be comprised of one common share and one-half of a common share purchase warrant.

Under the amended terms of the Red Kite Loan Agreement, the Corporation is required to raise aggregate net proceeds of \$10 million through equity and/or subordinated debt financing (the "Interim Financing Requirement"). The completion of the Offering and the Pala Convertible Loan Facility will satisfy the Interim Financing Requirement and bring the Corporation into full compliance with applicable covenants under the Red Kite and Pala loan facilities. In this event, the Corporation would have sufficient time until December 31, 2017 to progress its broad review of strategic alternatives, continue discussions with interested parties regarding potential strategic transactions, and conclude a transaction that maximises value to all shareholders. These potential transactions could

include the sale of the Corporation, or a joint venture arrangement with related financing to secure the remaining development capital for advancing the Pumpkin Hollow copper project to commercial production.

The Offering under the Amended Preliminary Prospectus

The Amended Preliminary Prospectus replaces and supersedes the preliminary short form prospectus of the Corporation filed on February 9, 2016. The Amended Preliminary Prospectus was filed with the securities regulatory authorities in each of the provinces of Canada, except Québec. The Offering will be conducted on a "best efforts" basis pursuant to an agency agreement to be entered into between the Corporation and a syndicate of agents co-led by GMP Securities L.P. and Dundee Securities Ltd. (collectively, the "Co-Lead Agents") and including Haywood Securities Inc. (together with the Co-Lead Agents, the "Agents"). The issue price of the Subscription Receipts (the "Issue Price") and the terms of the share purchase warrants comprising the Units will be determined in the context of the market.

The Corporation will grant the Agents an option (the "Over-Allotment Option") to sell up to such number of additional Subscription Receipts as is equal to 15% of the number of Initial Securities initially sold under the Offering (the "Additional Securities" and, together with the Initial Securities, the "Offered Securities"). The Over-Allotment Option shall be exercisable, in whole or in part, on the Closing Date and for a period of 30 days thereafter, at the Issue Price per Additional Security. If the Over-Allotment Option is exercised following satisfaction of the Release Conditions, Units will be issued in lieu of Subscription Receipts.

Upon closing of the Offering, the gross proceeds from the sale of the Offered Securities (the "Escrowed Proceeds") will be deposited with and held by Computershare Trust Company of Canada, as escrow agent (the "Escrow Agent"), and invested in short-term interest bearing or discount debt obligations issued or guaranteed by the Government of Canada (and other approved investments), pending satisfaction of the Release Conditions, which include the condition that, upon release of the Escrowed Proceeds and the Corporation's receipt of the Pala Advance (as defined below), the Corporation will not be in breach of any of the material terms and conditions of the Red Kite Loan Agreement. Upon satisfaction of the Release Conditions, the Subscription Receipts will automatically be converted into Units, without payment of additional consideration or further action on the part of the holders.

In the event that the Release Conditions are not satisfied or waived on or prior to May 30, 2016 or such later date as is agreed to by the Corporation and the Agents (the "Termination Time"), the Escrow Agent shall return to the holders of the Subscription Receipts an amount equal to the full subscription price therefor and their pro rata share of interest earned on the Escrowed Proceeds.

Pala Convertible Loan Facility

On April 22, 2016, the Corporation entered into definitive documentation regarding the amendment of its existing \$21.7 million subordinated loan facility into the Pala Convertible Loan Facility. Under the terms of the Pala Convertible Loan Facility, and subject to certain conditions:

1. Pala Advance: Pala will advance a further \$5,000,000 (the "Pala Advance"), such that an aggregate principal amount of \$26.7 million will be outstanding under the Pala Convertible Facility.
2. Maturity Date: The Pala Convertible Loan Facility will mature and be payable on the earliest of:
 - a. December 31, 2017;
 - b. the date when outstanding amounts under the Red Kite Loan Agreement are paid in full; and
 - c. a change of control event.
3. Interest Rate: 12% per annum
4. Voluntary Prepayment and Prepayment Fee: All outstanding amounts under the Pala Convertible Loan Facility may be prepaid in full by the Corporation with payment of the following early repayment fee (the "Prepayment Fee") equivalent to:
 - a. 25% of outstanding amounts to be prepaid, if prepayment is made prior to December 31, 2016; and
 - b. 35% of outstanding amounts to be prepaid, if prepayment is made between January 1, 2017 and December 31, 2017.

The Prepayment Fee will be applicable on any repayment of the Pala Convertible Loan Facility prior to December 31, 2017.

5. Conversion: Pala may elect to convert the principal amount and any accrued and unpaid interest under the Pala Convertible Loan Facility, including the Prepayment Fee, if applicable, in full or in part, at the Conversion Price (as defined below), into common shares in the capital of the Corporation at any time up to

the Maturity Date or upon any voluntary prepayment by the Corporation. The Conversion Price will be \$1.11 per share, which represents a 15% premium to the 20-day volume-weighted average price ("VWAP") of the common shares of the Corporation immediately prior to signing of the definitive loan documentation, subject to potential adjustment such that the Conversion Price will not exceed 115% of the Issue Price in the Offering.

6. Arrangement Fee: \$200,000 due upon execution, payable out of the proceeds of the Pala Advance.
7. Warrants: Pala will be issued 2.5 million warrants with a 3 year term, exercisable to acquire common shares of the Corporation at an exercise price of \$1.20 per share.
8. Board Nomination Right: Pala will be granted rights to nominate up to three members of the Board of Directors of the Corporation, subject to Pala maintaining certain share ownership thresholds.
9. Right to Purchase: Pala will be granted the right, so long as it holds at least 15% of the outstanding common shares of the Corporation, to participate in future equity offerings of the Corporation.

The Pala Convertible Loan Facility and the Pala Advance remain subject to a number of conditions precedent, including receipt of shareholder approval. The Corporation plans to hold an annual and special shareholder meeting (the "Shareholder Meeting") on May 27, 2016, at which it will seek disinterested shareholder approval of the Pala Convertible Loan Facility.

Pala Bridge Loan Default and Agreements

On August 26, 2014, the Corporation closed a \$20 million bridge loan facility with Pala Investments Limited. The Pala Facility can be drawn in \$5 million tranches. Through November 10, 2015 \$20 million (four tranches) has been drawn from the Pala Facility. The annual interest rate is 10% and a 4% arrangement fee is due upon each tranche drawn. The Pala Facility is secured against the Corporation's assets, but is subordinate to the security granted in connection with the \$200 million senior credit facility announced by the Corporation on December 30, 2014.

The \$20 million Pala bridge loan contains a \$10 million minimum working capital provision which was the same as the Red Kite facility prior to the January 2, 2016 Red Kite agreement which reduced Red Kite's minimum working capital provision to \$5 million.

The Pala Facility had a \$10,000 minimum working capital requirement which was reduced to \$2,000 to align with Red Kite loan amendments agreed in January and April 2016. Therefore the Corporation is currently in default of the minimum working capital requirement of the Pala Facility. No default notice has been received by the Corporation.

On a successful closing the financing transaction contemplated by the Amended Preliminary Prospectus, the maturity date of the Pala loan will be extended December 31, 2017, and the the Corporation will come into complete compliance with the terms of the Pala loan.

Red Kite Loan Default and Agreements

The original \$200 million Red Kite Loan facility was executed on December 30, 2014 with amendments to this loan agreement announced on September 30, 2015, January 2, 2016 and April 5, 2016.

April 2016 amendment

The April loan amendments further improve the terms of the Red Kite loan agreement as follows:

- reducing the required funding under a 2016 Financing ("the 2016 Financing") to \$10 million from \$15 million;
- extending the outside date for completion of the 2016 Financing to May 31, 2016 from April 15, 2016;
- reducing the working capital maintenance requirement to \$2 million from \$5 million;
- confirms December 31, 2017 as the final date for satisfaction of the initial loan drawdown conditions;
- extending the outside date of first commercial production to March 31, 2020; and,
- eliminating the requirement for 2017 loan interest to be deposited in escrow by December 31, 2016, instead only requiring that interest be paid on a monthly basis in advance starting in January 2017.

The amended agreement includes customary provisions for such agreements, including restrictive covenants applicable until the completion of the 2016 Financing. If the Corporation does not complete the 2016 Financing before May 31, 2016, all amounts outstanding under the Red Kite loan agreement will be immediately due and

payable by the Corporation and Red Kite will be in a position to exercise all remedies available to it under the Red Kite Loan Agreement and related security agreements.

Completion of the 2016 Financing Transaction will bring the Corporation into complete compliance with the revised working capital covenant contained in the Red Kite Loan Facility and the balance sheet loan amounts will also be reclassified back from a current liability to a long term liability.

January 2016 amendment

On January 2, 2016, Nevada Copper reached a further amendment to the Amended Loan Facility, pursuant to which Red Kite will not exercise its rights and remedies under the Amended Loan Facility as a result of the non-completion of the Interim Financing Transaction. Under this January 2016 amendment, the Corporation has until April 15, 2016 to complete an alternative \$15 million financing. These and other terms are set out below.

The key provisions of the January 2016 amendments are as follows:

1. Loan Agreement Extension. Red Kite has agreed to:
 - a. not exercise its rights and remedies under the Amended Loan Facility as a result of the non-completion of the Interim Financing Transaction by December 31, 2015 and allow until April 15, 2016 for the completion of an alternative interim financing transaction in the minimum amount of \$15 million (the "2016 Financing Transaction"), following which the Amended Loan Facility will be in good standing;
 - b. reduce the minimum working capital requirement from \$10 million to \$5 million; and
 - c. subject to certain conditions, including depositing all loan interest cash payments due in 2017 into an escrow account by December 31, 2016, extend the project construction drawdown conditions by a further 12 months to December 31, 2017.
2. Off-take Buyback. In connection with the initial execution of the Loan Agreement, Nevada Copper entered into an offtake agreement pursuant to which Red Kite, assuming the full \$200 million drawdown, would have had the right to purchase up to 74.5% of the copper concentrates produced from the underground deposits at the Pumpkin Hollow Project. Red Kite's percentage offtake right is pro-rated based on the principal amount drawn under the Loan Agreement, and based on current drawdowns; Red Kite had the right to purchase 33.5% of copper concentrate production from the underground deposits. The Corporation has agreed to buy and Red Kite has agreed to sell its rights under the amended offtake agreement for \$10 million, which amount will be funded by an additional draw under the Loan Agreement. The offtake buyback reduces the percentage of the offtake from the Pumpkin Hollow underground deposits allocated to third parties from 59% to 25.5%. Copper concentrates to be derived from ores of the larger open pit deposits remain 100% uncommitted. The offtake buyback price will allow for lowered smelter charges and better copper price certainty on this portion of the concentrates while also providing improved financial returns upon commencement of commercial production.

September 2015 amendment

On September 30, 2015, the Loan Facility was amended to extend the maturity date from December 31, 2020 to December 31, 2021 while the dates of loan drawdown, repayment commencement and first commercial production, were all extended by 12 months. Under the Amended Loan Facility, interest payments are accrued from July 1, 2015 to December 31, 2016, with the first interest payment thereafter due on March 31, 2017. Accrued interest is capitalised to loan principal along with a 3.5% transaction fee.

The Amended Loan Facility also required that, prior to December 31, 2015 the Corporation complete an equity and/or subordinated debt financing transaction for proceeds of \$20 million (the "Interim Financing Transaction"). These funds were to provide adequate working capital while also providing funding for further project optimisation. As at December 31, 2015 the Corporation is in default of this financing provision. In addition, the Corporation is currently in default on the minimum working capital covenant contained in the Red Kite Loan Facility.

December 2014 Red Kite Loan Agreement

On December 30, 2014, the Corporation closed a \$200 million senior secured loan facility (the "Loan Facility") and copper concentrate off-take (the "Concentrate Off-Take") agreement with RK Mine Finance ("Red Kite").

This Loan Facility replaces the Corporation's previous loan facility entered into on March 28, 2013 (the "Previous Facility"). Net proceeds from the initial \$90 million drawdown on closing was used for purposes of repaying the Previous Facility and advancing the underground mine (the "Underground Mine") on Nevada Copper's 100% wholly owned Pumpkin Hollow copper project located near Yerington, Nevada.

A summary of the original Loan Facility and Concentrate Off-Take terms, prior to further amendments, are as follows:

- \$90 million has been paid to Nevada Copper of which \$57.1 million was used to repay the Previous Facility;
- A further \$110 million will be advanced on the completion of certain project and financing milestones;
- The Loan Facility matures on December 31, 2021, with interest payable at an annual rate of the greater of LIBOR or 1% plus 10% during pre-completion and the greater of LIBOR or 1% plus 7.5% post completion;
- Interest on the initial amount drawn, and subsequent draws, will be paid quarterly with a principal repayment holiday until September 30, 2018, following which \$82.5 million of outstanding principal will be repaid in 13 quarterly sculpted payments and the remaining outstanding principal will be repaid in one final balloon payment on the maturity date;
- The Corporation may repay the loan in full without penalty prior to maturity. The loan is secured against all current and future assets of the Corporation and its subsidiaries. As part of the loan agreement, the Corporation has paid an arrangement fee of 3.5% of the principal amount of the loan facility;
- Under the terms of the original 2014 Concentrate Off-Take agreement, the Corporation agreed to sell to Red Kite, for the life of the mine on the Underground Mine, up to 74.5% of copper concentrates produced from the Underground Mine ("Underground Tonnage"), or at Red Kite's option fixed tonnage equivalent of the Underground Tonnage from a future underground or open pit operation ("the Red Kite Option"). In January 2016, as part of loan amendment agreement, the Corporation repurchased the Red Kite's offtake obligation. This repurchase leaves only 25.5% of the underground concentrates committed to a previous lender. The Concentrate Off-Take agreement does not include any rights to future copper concentrate production from the open pit deposits and provides for benchmark-referenced treatment and refining charges, with standard payment factors for contained copper, gold and silver.

Project Highlights:

- All key construction and operating permits received for the large 70,000 tons/day Integrated Project;
- Completion of acquisition of Federal Government lands places the entire project development on private lands owned or controlled by Nevada Copper;
- Highlights of 2015 include:
 - Completion of the East shaft to the 1,900 foot production level;
 - Completion of 640 feet of lateral development on the 1,900 foot level including three drill stations;
 - Installation of shaft dewatering stations and other underground infrastructure;
 - Completion of a new Feasibility Study that contemplates a 70,000 tons per day concentrator with dual sources of mill feed from open pit and underground;
 - Successful drilling programs in the North and South open pit deposits and the East underground deposit totalling 14,100 meters.

Project Permitting

The Project is fully permitted for construction and operation of a 70,000 tons per day integrated open pit and underground mine. Proposed future access roads, power lines and water lines are also located within private land owned or controlled by the Corporation. No federal permitting is required, now or in the future, for full construction and operations of the mine. This affords Nevada Copper significant flexibility to assess and choose alternative project

development pathways that recognize the current weak copper markets but still allow for later expansion to realize the full potential of the Project.

Federal Land Acquisition

On October 13, 2015, Nevada Copper received the deed of sale and completed the Federal Land Acquisition, acquiring 9,145 acres (14.3 square miles) of land from the City of Yerington ("the City"). This parcel of land surrounds the Corporation's current 1,538 acres (2.4 square miles) of private land and constitutes the majority of the 10,059 acres of Federal land acquired by the City from the Bureau of Land Management ("BLM") in August 2015. Pursuant to the Corporation's agreement with the City, deeding the land to Nevada Copper was the final step in the land acquisition process. The City retains 914 acres in the extreme northwestern area for public amenity purposes.

The Corporation now owns or controls 10,683 acres (16.7 square miles) of privately-owned land that encompasses 100% of the proposed 70,000 tons per day Pumpkin Hollow copper project development. The land is zoned "M1 Industrial" under City planning statutes, a zoning that allows for any proposed mine development. The Corporation controls all surface and mineral rights on the private lands, plus an additional 6,830 acres (10.7 square miles) of unpatented BLM mineral claims contiguous to the private land, for a total of 17,513 acres (27.4 square miles) of mineral rights.

In May 2016 Nevada Copper was served with a complaint in Nevada alleging that it was in breach of an expired option agreement. This agreement was in relation to an option to acquire a conservation easement on a property ("Easement Property") located more than 20 miles from the Corporation's Pumpkin Hollow copper project. Neither the Easement Property nor the option agreement provides any benefit to the Pumpkin Hollow project. Acquisition of the easement is not necessary to proceed with any aspect of the Pumpkin Hollow project. The Corporation considers this complaint to be without legal merit and not material.

Nevada Copper will be reviewing the additional exploration potential on the newly-acquired private land, particularly on the northern and westerly extensions to the North open pit deposit. Federal permits for drilling are no longer required for any future exploration activity on this private land.

Solar Development Potential

On February 11, 2016, the Corporation entered into an agreement with NV Energy Inc. ("NV Energy") to conduct a study of the potential to develop a solar energy generation project on Nevada Copper's privately-owned land ("Solar Study"). This land is adjacent to the Corporation's proposed Pumpkin Hollow copper development project.

Nevada Copper expects this Solar Study to be completed within three months. Nevada Copper and NV Energy seek to evaluate, at a scoping level, the feasibility of developing a solar facility on private land owned by Nevada Copper that is available for solar generation facilities. Subject to the results of the Solar Study, the parties would have an opportunity to enter into an agreement to pursue a solar development opportunity. The Solar Study will be done at no cost to the Corporation, in consideration of which, a 90-day exclusivity period was granted to NV Energy. After the 90-day exclusivity period, if no development agreement has been mutually agreed after good-faith efforts, the Corporation will be free to solicit interest from other parties.

Solar power generation was one of the key industrial opportunities afforded by the Corporation's acquisition of the large private land package. This is due to both the industrial zoning of the entire site and lack of any requirements for land use permits, as well as the high solar potential of the area. According to data published by the National Renewable Energy Lab ("NREL"), the Pumpkin Hollow project area, has a high level of solar irradiation, 6.5-7.0 kilowatt hours per square meter per day (kW-hr/m²/day).

Depending on the ultimate scope of the Pumpkin Hollow copper mine development, the Corporation estimates that 2,000-4,000 acres of land adjacent to, and outside of, the area of proposed mine facilities could be utilized for solar generation. Based on the NREL solar irradiation data, a 200 megawatt ("MW") typical solar photovoltaic project in the Yerington area would require 1,600-2,000 acres of land. This implies a potential for up to 500 MW of solar power development capacity. Evaluation of energy transmission options would be part of the Solar Study. Solar energy generated at the project could be used at the site and/or transmitted into the grid via existing high voltage transmission lines located east of the project area, or via other routes. A power line corridor connecting the project to transmission line is part of the proposed copper project development plan.

The land proposed for solar development is privately owned by Nevada Copper and has been zoned M-1 Industrial by the City of Yerington. This zoning allows for solar development and has no environmental or engineering constraints for such a development. The land is also close proximity to federal and state highways and other infrastructure. With such a potential solar project development, the Pumpkin Hollow copper project would help enhance renewable energy development in Nevada. The Nevada Copper mine project and an adjacent solar project also could realise mutual benefit with potential shared grid-connection costs. If found to be feasible, a solar power development could be developed as a standalone operation, or as part of the proposed copper mine development at Pumpkin Hollow.

Project Plans for 2016

During 2016, management will focus on maintaining the Project's "construction ready" status. In addition, subject to financing, management will consider alternate project development plans that would evaluate a smaller initial development of the open pit deposit that targets higher grade areas of the deposits first, followed by possible expansion at a later date. Value engineering and further project optimization will be part of this project re-assessment process that is currently underway.

With a consensus that copper prices are expected to rise over the next three years, the Corporation will accelerate discussions in order to position the project for a 2018 production start. Financing discussions may take the form of a joint venture partnership; project bank debt with, or without, associated offtake; Engineering, procurement, and construction management ("EPCM") contracts with offtake provisions that bring associated low-cost Export Credit Agency ("ECA") financing; or combinations of the foregoing. These discussions are currently underway and, as a fully-permitted large copper project in Nevada, the Corporation also has interest from the corporate mining sector.

The Corporation has two development options -- both supported by feasibility studies. These two development options are both fully permitted and can be developed sequentially:

- Smaller, lower capex underground operation for which the hoist, headframe and production sized shaft are already in place; or,
- Larger integrated operation with a 70,000 tons per day concentrator with ore feed from both underground and open pit mine.

Nevada Copper, with the support of its major shareholder Pala and lenders, will take the time necessary to carefully consider financing options and strategic alternatives that are reflective of fair value for the Pumpkin Hollow project as a fully-permitted project, in an ideal location, with abundant infrastructure.

Corporate Developments

In January 2016, Mr. Victor Bradley was announced as Non-Executive Chairman of the Board. Mr. Bradley has been Lead Director of Nevada Copper since 2013. Mr. Bradley is a Chartered Professional Accountant with more than 50 years of experience in the mining industry having founded, financed and operated several mining and advanced stage exploration and development companies. The Corporation also announced the appointment of two new directors, Mr. Evgenij Iorich and Mr. Stephen Gill, as representatives of Pala Investments Ltd. ("Pala"). Messrs. Iorich and Gill are both Portfolio Managers at Pala and will replace each of Mr. Michael Barton and Mr. Philip Clegg, who have resigned from the Board.

Mr. Iorich has over ten years of experience in the natural resources sector. His commodity experience extends across a broad range of bulk commodities, as well as precious and base metals. Mr. Iorich has worked with a number of Pala's portfolio companies on a range of strategic initiatives, M&A opportunities, operational and financial planning and structuring. He is a director of Peninsula Energy and Asian Mineral Resources and, in addition, with his considerable experience in oil and gas, is also a director of Serinus Energy. Prior to joining Pala in 2006, Mr. Iorich was a financial manager at Mechel, the Russian metals and mining company, where his responsibilities included all aspects of budgeting and financial modeling.

Mr. Gill has been at Pala since 2008, during which time he has been involved in many of Pala's principal investments covering a range of commodities, as well mining services and consumables sectors. Mr. Gill has also supported many of Pala's investee companies in defining and implementing strategic initiatives. Prior to joining Pala, Mr. Gill was at AMEC Plc. (now AMEC Foster Wheeler), an engineering consulting firm, where he advised on a range of natural resources transactions, including the IPO of the Kazakhstan state oil company and CITIC Resources' acquisition of the Karazhanbas oilfield. Mr. Gill also acted as an advisor across a range of private equity

transactions, including investments in businesses spanning mining, metals processing, and mining consumables manufacturing industries. Mr. Gill holds an MBA from the IE Business School in Madrid. He also holds an MSc from the University of North Carolina and a BSc from the University of Wales.

Previously, in June 2015, the Board of Directors of Nevada Copper announced the election of Mr. James Askew to its Board of Directors. Mr. Askew holds a Bachelor of Mining Engineering (Honours) and Master's Degree in Engineering Science and has over 40 years of international experience as a Director and/or Chief Executive Officer. Mr. Askew has extensive technical expertise in both open pit and underground mines including design, construction and operations in all major continents. In addition to his vast technical experience, Mr. Askew has overseen numerous financings, M&A successes and assembling of key personnel for mine-building teams. Mr. Askew is currently the Chairman of Oceanagold Corporation and Syrah Resources, as well as a Director of Evolution Mining and Asian Mineral Resources. Other past listed company directorships include PMI Gold (Chairman), Sino Gold (Chairman), Yamana Gold (Non-Executive Director), and Ivanhoe Australia (Non-Executive Director).

Land Bill, Open Pit Permitting and Water Rights

The Pumpkin Hollow mine development, including both open pit and underground mines, and one or two mills, are fully permitted under State of Nevada regulations. The reclamation permit, which was the final open pit permit, became effective on August 14, 2015. A revised air quality permit was issued on July 30, 2015. Proposed future access roads, power lines and water lines are also located within this private land. No federal permitting is required, now or in the future, for full construction and operations of the mine. This affords Nevada Copper significant flexibility regarding project development options and for future expansion of operations should this be indicated.

On August 20, 2015 the Corporation received notice of the completion of the Yerington Land Conveyance (the "Conveyance") of Federal land to the City. The BLM signed a deed of sale that conveyed 10,059 acres (final surveyed acres) of federal land to the City. The appraised fair market value of \$1.8 million was fully funded by Nevada Copper. Of the 10,059 acres, on October 12, 2015, the City deeded to the Corporation at no additional cost, 9,040.11 acres and 105.53 acres, located in Lyon and Mineral Counties respectively. Completion of the land acquisition places the entire integrated project on private lands owned or controlled by Nevada Copper.

With regard to water rights, Nevada Copper has obtained 4,224 acre feet annually of rights covering 100% of its anticipated Pumpkin Hollow project water needs including the large Stage 2 open pit project. Notably, the entire project area is outside of irrigated lands in Mason Valley. Detailed studies have demonstrated that groundwater in the mine project area is not hydraulically connected to the alluvial aquifers in Mason Valley and project operations will not impact that important aquifer.

2015 Integrated Feasibility Study

The IFS envisages a single, large 70,000 tons/day concentrator with dual sources of mill feed comprising an average of 63,500 tons/day of open pit ore blended with 6,500 tons/day of high grade ore from the Eastern underground deposits. The IFS incorporates all available current information, including approximately 32,500 feet (9,900 meters) of new drilling data from 2012 and 2013, mine plans, engineering work and updated capital and operating costs for both the open pit and underground operations associated with this development.

The previous open pit mining plans for the Stage 2 open pit demonstrated a production profile with higher than average copper grades (0.5% to 0.6%) in the early years (see 2012 Stage 2 Feasibility Study filed on SEDAR). The addition of higher grade mill feed (plus 1.75% copper) from the Eastern underground deposits will further improve mill feed grades in the important early production years. The enhanced mill copper feed grades, coupled with elimination of the capital required for the smaller 6,500 tons/day mill proposed for the standalone Stage 1 underground project, are anticipated to provide better capital efficiency and overall better project economics.

After the stand alone Stage 2 Open Pit Feasibility Study was completed in 2013, results from 32,414 feet (9,880 meters) of additional drilling on the North Deposit were received. In Q2-2014, the Corporation decided to incorporate these drill results to ascertain if the data would improve the present mine design. In particular, drill hole NC12-34 as previously disclosed in a news release dated September 13, 2012, on the southwestern edge of the North Deposit ultimate pit intersected 690 feet (210.3 meters), 625.3 feet (190.6 meters) true thickness, grading 1.17% copper, including 150 feet grading 3.8%. Another drill hole, NC13-05, disclosed in a news release dated June 17, 2013, along the western edge of the North deposit and not included in the 2013 Feasibility Study, intersected several zones including 125 feet (38.1 meters), true thickness, grading 1.45% copper. The new information resulted in an

opportunity to significantly improve the grade profile and reduce mine waste rock quantities by re-evaluating the pit shell in the North Deposit. Preliminary work to date on the mineral resource calculations and production schedule has demonstrated positive results with respect to the copper grades and copper production in the early years, as well as overall life-of-mine copper grades.

Open Pit Drilling

The Corporation has successfully completed the first phase of a multi-phase Open Pit drilling program through completion of the final six drill holes. The holes were drilled in the North and South deposits as well as the Connector zone. All holes have been successful in intersecting copper mineralisation. The program was designed to expand open mineralisation and convert material currently classified as waste, into measured or indicated categories. Twenty five holes were completed and four holes pre-collared for a total of 36,400 feet (11,100 meters).

The highlights of the drill program include:

- Drilling was successful in expanding mineralisation within the core area of the North pit where material classed as waste was converted into mineral resources. One of the holes, NC15-04 intersected multiple zones of mineralisation totaling over 300 meters (1,000 feet);
- Mineralisation was expanded and remains open along the western and eastern edges of current North pit;
- The drilling shows that the shallow high grade zones in the North pit can be expanded further. NC15-16 intersected a shallow zone grading 1.29% copper over 38.7 meters (126.8 feet), 37.6 meters true thickness;
- Mineralisation continues to expand in the Connector zone between the North and South pits with NC15-13 intersecting 63.9 meters (209.5 feet) @ 1.39% copper, true thickness;
- Shallow and down dip mineralisation in the South deposit was expanded and remains open. The drilling also converted waste to mineralised material;
- New mineralisation was found in the McConnell Canyon Formation. This is the first time that copper mineralisation has been found on the property in this older geologic unit, and this opens up additional exploration possibilities; and
- Additional drilling is warranted as mineralisation remains open along the edges of the deposits. The second phase of drilling will target the expansion of these zones.

Eastern Underground Deposits and Underground Drilling

The Corporation achieved a major milestone on February 26, 2015 at its Pumpkin Hollow project by way of reaching the 1,900 foot main haulage level at its 24-foot diameter concrete-lined production sized shaft. A concrete-lined production shaft to the level of the main workings further de-risks the Pumpkin Hollow project and was defined as a project milestone in early 2011. Approximately 664 feet of lateral development at the 1,900 foot level was completed in the six months ended June 30, 2015 to allow for three drilling stations and a pump station.

Underground drilling of the East deposit commenced in May 2015 from drill stations at the 1,900 foot level. The underground drilling program consisted of delineation and development drilling focusing on further enhancing the high grade zones within the current mineral reserve, especially in areas planned for mining in the early years. This drilling program also provided additional data for mine development design while expanding the open mineralised areas. The first phase of underground drilling was completed from the 1,900 foot production haulage level. Several of the holes had significant intervals reporting over 2.5% copper. Ten development holes, and one shaft geotechnical hole, were drilled for a total of 2,965 meters (9,728 feet).

Early in 2012, management made a decision to forego a temporary sinking hoist arrangement and take the additional time to purchase and construct a production-sized hoist, hoist control room and erect a permanent head-frame. From 2012 to 2014 shaft related construction activities included: engineering, shaft foundation ("sub-collar"); "pre-sink" to 99 feet; installation of a production-sized hoist and control room; erection of a permanent head-frame; plus related surface facilities, and shaft sinking down to the 1,900 foot level.

The shaft is currently halted at the 1,900 foot level within the host skarn related rocks with little or no shaft water reporting to the bench. Pumps are installed on the 1,900 foot level and, along with the existing pumps at the mid-shaft, will be able to handle anticipated water inflows from the lateral development workings.

Iron Concentrate Study

Drilling in the South open pit area for the iron metallurgical test bulk sample has been completed. In April 2015, the Corporation announced a Memorandum of Understanding ("MOU") with a large multi-national steel producer to assess opportunities to exploit Pumpkin Hollow's iron resource. The assessments would include drill sampling consisting of six holes for a total of 8,500 feet (2,600 meters). Drill results have now been received with results reported for both iron and copper dominated zones.

Measured and indicated iron mineral resources total 235 million tons grading 30.7% iron using a 20% cut-off, were disclosed in the NI 43-101 Technical Report filed on SEDAR on July 9, 2015. Note that mineral resources that are not categorised as mineral reserves have not demonstrated economic viability. The assessments would include drill sampling, mine planning, engineering studies and metallurgical work. These studies will determine if a by-product magnetite (iron oxide) stream from the copper tailings at a future Pumpkin Hollow concentrator would be suitable as feed for downstream iron ore processing for use in steelmaking. Other work would focus how mining plans could be modified to deliver additional magnetite in the copper concentrator feed while minimizing loss of copper. Magnetite recovery circuits are not uncommon at copper operations which also contain magnetite in their mill feed.

2015 Project Construction

During 2015, shaft sinking and underground development work at the project site was under Cementation USA Inc.'s ("Cementation") management. Sinking advanced to the 1,900 foot depth, the main level from which lateral development was begun to allow for establishment of drill stations and for future access to the East ore zone. Cementation's shaft sinking and development crews have been de-mobilised from site and the Nevada Copper has hired three former Cementation hourly staff to operate and maintain the hoist, and provide for shaft access.

The pace of further developments at the Project will be controlled by the availability of funds from:

- \$1 million cash balance at March 31, 2016;
- \$110 million undrawn portion of the Red Kite loan facility (See December 30, 2014 News Release) the final draw of the loan facility will be advanced on the completion of certain project and financing milestones.
- \$24 million Caterpillar Financial Services Corporation ("Caterpillar") equipment lease finance facility (see October 1, 2013 News Release) which is to be used for the purchase of mobile equipment and a portion of which is subject to certain conditions; and,
- \$5 million undrawn portion of the Pala Convertible Loan facility.

Further project work in 2016 will be dependent on which project development option is advanced and the availability and timing of financing, including consideration of a partner for the large open pit development.

PUMPKIN HOLLOW MINERAL RESERVES AND RESOURCES

The following mineral reserve sections are summarised extracts from a feasibility study contained in a NI 43-101 Technical Report relating to an integrated underground and open pit mine. A press release dated May 28, 2015 initially reported the results of the feasibility study. The Technical Report was filed on SEDAR on July 9, 2015.

The Proven and Probable mineral reserves at Pumpkin Hollow are summarised below.

Mineral Reserves Western Open Pit Deposits								
Classification	Ore	Copper	Gold	Silver	Contained Copper	Contained Gold	Contained Silver	Cu Equiv.
	000's tons	%	Oz./ton	Oz./ton	000s lbs.	Ozs.	Ozs.	%
North Deposit								
Proven	122,403	0.479	0.001	0.056	1,172,749	174,708	6,861,605	0.51
Probable	178,241	0.422	0.001	0.051	1,504,814	178,241	9,096,741	0.45
Total	300,644	0.445	0.001	0.053	2,677,563	352,949	15,958,346	0.47
South Deposit								
Proven	143,117	0.328	0.001	0.038	937,826	143,117	5,374,544	0.35

Total	539,285	0.390	0.001	0.044	4,210,510	591,590	23,939,204	0.41

Mineral Reserves - Eastern Underground Deposits								
Classification	Ore	Copper	Gold	Silver	Contained Copper	Contained Gold	Contained Silver	Cu Equiv.
	000's tons	%	Oz./ton	Oz./ton	000s lbs.	Ozs.	Ozs.	%
Proven	8,923	1.587	0.006	0.124	283,224	53,131	1,109,132	1.70
Probable	23,680	1.174	0.005	0.109	555,934	115,864	2,588,637	1.20
Total	32,603	1.287	0.005	0.113	839,158	168,995	3,697,769	1.38

Mineral Reserves Open Pit & Eastern Underground Deposits								
Classification	Ore	Copper	Gold	Silver	Contained Copper	Contained Gold	Contained Silver	Cu Equiv.
	000's tons	%	Oz./ton	Oz./ton	000s lbs.	Ozs.	Ozs.	%
Proven	274,443	0.436	0.001	0.049	2,393,799	370,956	13,345,281	0.46
Probable	297,445	0.446	0.001	0.048	2,655,869	389,629	14,291,692	0.47
Total	571,888	0.441	0.001	0.048	5,049,668	760,585	27,636,973	0.47

Notes:

1. Totals may not add due to rounding.
2. Mineral reserves are as of an effective date of April 15, 2015
3. The mineral reserves and mine plans for the open pit deposits were determined using cutoff grades developed by Tetra Tech as appropriate for the mining method and costs associated with the deposits. For the Western deposit open pits the mineral reserves, mining method, and costs associated with the deposit were developed by Tetra Tech. The breakeven copper cutoff grades used were 0.156% and 0.159% for the North and South deposits respectively. The eastern underground deposits mineral reserves, mining method and associated with the deposit were developed by

Stantec and Nevada Copper. The underground reserve used a \$29/ton NSR cutoff developed using metals prices of \$3.00/lb, \$1,250/oz and \$18/oz for copper, gold, and silver respectively.

4. *Metal prices for the open pit copper, gold and silver assumed were \$3.15/lb, \$1,200/oz. and 18/oz. respectively. Tetra Tech is the independent Qualified Person who is responsible for the western deposit mineral reserve estimate. Stantec is the independent Qualified Person who is responsible for the eastern deposit mineral reserve estimate. The copper equivalency was determined using Base Case metals prices and metallurgical recoveries of 89.3%, 67.3% and 56.3% for copper, gold and silver respectively.*

Iron Mineral Resource

The Pumpkin Hollow project has considerable resources of iron in the form of magnetite. The following tables include only those iron resources amenable to open-pit mining methods in the Western deposits. Possible mining, recovery and sale of a magnetite concentrate may be considered in a future study.

The iron mineral resource estimate below was disclosed in Nevada Copper's NI 43-101 technical report filed on July 9, 2015.

	Cut-off Grade	Tons	Grade	Contained
Category	% Fe	(million)	%Fe	Fe Tons (million)
Measured	20	201.5	31.0	62.6
Indicated	20	33.8	28.8	9.7
Measured & Indicated	20	235.3	30.7	72.3

Note: Mineral resources that are not categorised as mineral reserves have not demonstrated economic viability.

If an updated feasibility study demonstrates the iron resource to be economically viable, inclusion of iron in the open pit block model values is expected to significantly expand the size and tonnage of the Western open pits, and lower waste tonnages and strip ratio.

INTEGRATED FEASIBILITY STUDY JULY 2015

Highlights

The following sections are summarised extracts from a feasibility study contained in a NI 43-101 Technical Report relating to an integrated underground and open pit mine. A press release dated May 28, 2015 initially reported the results of the feasibility study. The Technical Report was filed on SEDAR on July 9, 2015.

- Long mine life of 23 years with low-risk profile located in an ideal mining jurisdiction close to existing infrastructure, an increase of 5 years from the first published integrated feasibility study, with production ramp-up targeted for 2018;
- Assuming the Base Case of US\$3.15 copper, US\$1,200 gold and US\$18 silver, the Integrated Project generates Life-of-Mine ("LOM") after-tax net cash flow of US\$2.5 billion, after-tax NPV@5% of US\$1.1 billion, an after-tax IRR of 15.6% with 4.7 year payback;
- Significant LOM metal production of 4.5 billion pounds (2.05 million tonnes) of copper, 512,000 ounces of gold and 15.6 million ounces of silver in a quality copper concentrate. Average annual copper production of 275 million pounds in years 1 to 5;
- The project development consists of a 63,500 tons/day open pit mine and 6,500 tons/day underground mine, feeding a single 70,000 tons/day concentrator, generating substantial annual cash flow over LOM;
- Proven and Probable Mineral Reserves, including open pit and underground mineable, are 572 million tons of ore grading 0.47% copper equivalent¹, containing 5.05 billion pounds of copper, 761,000 ounces of gold and 27.6 million ounces of silver;

- Initial capital costs are estimated to be \$1.04 billion including contingencies, excluding working capital of \$33 million. Sustaining LOM capital is \$0.63 billion;
- Low LOM site operating costs of \$11.80 per ton of ore-milled (Year 1 to 5 - C1 Production Costs at \$1.49/lb. payable copper);
- The IFS includes drilling data to 2011 for the underground deposits and 2013 for the open pit deposits. Further upside and optimisation potential exists from current planned drilling in 2015 which is not included in the current IFS;
- The IFS confirms the technical and financial viability of constructing and operating a 70,000 tons/day copper mining and processing operation at Pumpkin Hollow comprising a single large concentrator with mill feed from both open pit and underground operation.

¹ *The copper grade equivalency was determined using Base Case metals prices and metallurgical recoveries of 89.3%, 67.3% and 56.3% for copper, gold and silver respectively*

Annual copper production in concentrates and C1 operating costs

	Units	Years 1-5*	Years 1-10*	LOM (Average)
Copper in Concentrates	000s lbs./yr.	274,700	246,300	198,200
Copper in Concentrates	Tonnes/yr.	124,600	111,700	89,900
C1 Production Costs**	\$/lb payable copper	\$1.49	\$1.70	\$1.76

** Note starting post ramp-up*

***The direct cash costs of mining, milling, and concentrating, site administration and general expenses, concentrate treatment charges, and freight and marketing costs, less the net value of gold and silver by-product credits*

Summary of Economic Results

		Low Case	Base Case	High Case
Copper Price	\$/lb	\$2.85	\$3.15	\$3.75
Gold Price	\$/oz	\$1,200	\$1,200	\$1,200
Silver Price	\$/oz	\$18	\$18	\$18
(In Millions of US Dollars)				
Net Smelter Revenue, after royalty		\$10,768	\$11,990	\$14,434
Net Cash Flow	Pre-tax	\$1,831	\$2,992	\$5,315
Net Cash Flow	After-tax	\$1,584	\$2,514	\$4,249
Annual Net Cash Flow	Yr. 1-5 avg.	\$204	\$262	\$366
Pre-tax Operating Margin*	Yr. 1-5 avg.	\$300	\$380	\$540
NPV 5%	Pre-tax	\$659	\$1,362	\$2,768
NPV 5%	After-tax	\$534	\$1,100	\$2,155
IRR	Pre-tax	11.3%	17.5%	28.8%
IRR	After-tax	10.4%	15.6%	24.6%
Payback - years	Pre-tax	7.9	4.2	2.8
Payback - years	After-tax	8.2	4.7	3.2

* Note: Net revenues less smelter charges, concentrate transport and site operating costs.

Integrated Operations Development Schedule

At the East underground zone, a production sized hoist is operational along with the permanent head frame. A 24 foot diameter concrete lined production/service shaft has been completed to the 1,900 main haulage level. Sinking of a ventilation shaft is a critical path activity for the underground development and would start immediately upon securing of financing.

Integrated Operations Mining

Concurrent development of open pit and underground operations was selected in order to maximise the overall recovery of copper from the Pumpkin Hollow deposits and to yield the best economic results.

The open pit deposits will be developed sequentially. The North open pit deposit will be developed first, starting with a pre-strip once mining equipment has arrived and been assembled at site, and when electric power is available to the shovel. Open pit mill feed will come from the North deposit for the first 13 years when mining will transition to the South deposit.

The East underground deposit will be developed first via the existing East shaft. All underground production (6,500 ton/day) will come initially from the East deposit while access is developed towards the E2 deposit to the south. E2 development will occur from underground by way of a 3,500 foot (1,067 meter) ramp from the East zone. Ventilation and secondary egress shafts will be constructed for both East and E2 zones when required.

Integrated Operations Process Plant

Ore will be transported from the open pit and underground mines to a nominal 70,000 ton/day (63,500 tonne/day) concentrator located west of the open pits. Open pit ores are trucked from the pit to a surface crusher before conveyance to the stockpile at the process facility. Underground ore is crushed underground, hoisted to surface via

an existing 24-foot diameter production/service shaft and transported overland approximately 3 miles (4 kilometers) by truck to the process facility. Underground and open pit ores are fed separately into the mill via conveyor.

The concentration circuit is conventional with a single, large SAG grinding mill and two secondary ball mills with subsequent flotation, followed by thickening and pressure filtration to produce a final concentrate grading 25.5% copper and containing payable gold and silver. Primary grind size is 150 microns with an overall copper recovery of 89.3%. Gold and silver recoveries to the copper concentrates are 67.3% and 56.3% respectively.

Integrated Operations Capital Costs

The project initial capital costs are estimated at \$1.04 billion with an accuracy of plus/minus 15% as of March 2015, including an initial contingency of \$67 million. The contingency allowance is calculated based on assessed factors for each of the major Direct and Indirect cost categories.

The major direct cost items include development of the East underground mine, open pit mine equipment, leasing costs, North deposit pre-stripping, process plant, tailing storage facility, site infrastructure and offsite rail load-out facility. Indirect costs include such major areas as engineering and procurement, construction management, construction in-directs, freight and commissioning, spares inventory, first fills, and Owners Costs.

Area	Initial	Sustaining	Total
	US\$M	US\$M	US\$M
Open Pit Mine	\$263	\$222	\$485
Underground Mine	81	158	238
Ore Handling	12	2	15
Process Facility	268	52	320
Dry Stack Tailings Storage	69	79	148
Infrastructure	88	-	88
Water Management	18	2	19
Environmental & Reclamation	12	41	54
Subtotal Directs	811	556	1,367
Construction Indirects	66	35	101
Spares & Warehouse Inventory	10	2	12
Initial Fills	4	-	4
Freight & Logistics	15	2	17
Commissioning & Start-Up	2	-	2
EPCM	58	-	58
Vendor & Consulting Assistance	1	-	1
Subtotal In-directs	156	39	195
Contingency	67	39	106
Owner Costs	7	-	7
Total Capital	\$1,041	\$634	\$1,675

Working capital required for initial operations is estimated to be \$33 million. LOM sustaining capital totals \$0.63 billion and includes development costs associated with the E2 underground deposit and related equipment; South open pit deposit development costs; replacement of, and additions to, surface mobile equipment; lease costs for the initial mining fleet; reclamation costs; and expenditures on the tailings storage facility.

Operating Costs

LOM site unit operating cash costs, net of capitalised pre-stripping and other predevelopment costs, are \$11.80 per ton-milled, as summarized in the table below:

LOM Unit Operating Cost Summary	
Area	\$/ton-milled
Open Pit Mining	\$5.03
Underground Mining	1.45
Processing	4.73
Tailings & Water Management	0.17
Environmental	0.02
G&A	0.40
Total LOM Site Operating Costs	\$11.80

Note: The cost of operating leases and Nevada Net Proceeds of Mining tax adds \$0.72/ton and \$0.28/ton, respectively.

Unit open pit mining cash costs average \$5.34 per ton of open pit ore mined and milled. This equates to \$1.16 per ton of open pit material mined, including waste and ore. Average LOM strip ratio for the North and South deposits is \$3.59. Underground mining costs average \$24.06 per ton of underground ore mined, excluding \$1.25 for truck transport of ore to concentrator.

LOM Unit Mining Costs	
Open Pit (\$/ton of open pit ore mined)	Underground (\$/ton of underground ore mined)
\$5.34/ton	\$24.06/ton

A power cost of \$0.065/kwh was used for IFS purposes, based on NV Energy expected rates.

Qualified Persons

In November 2014 Nevada Copper commissioned Tetra Tech and Stantec to prepare an updated Pumpkin Hollow Project Integrated Feasibility Study Technical Report in accordance with NI 43-101. The scientific and technical information in this release has been reviewed and approved by Mr. Ed Lips, PE, of Tetra Tech, who is overall manager for the IFS and who is an Independent Qualified Person within the meaning of NI 43-101. It has also been reviewed by Mr. Mel Lawson, SME-RM, Principal/Senior Consulting Engineer, Stantec Consulting Services Inc. who is an Independent Qualified Person within the meaning of NI 43-101.

The technical information was also reviewed by Gregory French, P.G., Vice-President Exploration & Project Development of Nevada Copper, Timothy D. Arnold, PE, Vice-President of Operations and Robert McKnight, P. Eng., Executive Vice-President of Nevada Copper, all of whom are Non-independent Qualified Persons within the meaning of NI 43-101.

Readers should refer to the IFS for further details of the project development. The IFS was filed in accordance with NI 43-101 on SEDAR (www.sedar.com) on July 9, 2015.

Alternative Performance Measures

"Copper Production Costs", "Life of Mine Operating Costs", "Life of Mine site unit operating costs" and similar terms are alternative performance measures. These performance measures are included because these statistics are key performance measures that management may use to monitor performance. Management may use these statistics in future to assess how the Corporation is performing to plan and to assess the overall effectiveness and efficiency of mining operations. These performance measures do not have a meaning within IFRS and, therefore, amounts presented may not be comparable to similar data presented by other mining companies. These performance measures should not be considered in isolation as a substitute for measures of performance in accordance with IFRS.

Pumpkin Hollow Project Expenditures

Project costs capitalised as for the three months ended March 31, 2016 on the Pumpkin Hollow Copper Development Property consists of the following:

Development Costs (expressed in thousands of United States dollars)			
	Mar. 31, 2016	2016 Expenditures	Dec. 31, 2015
Property payments	\$1,961	\$-	\$1,961
Advance royalty payments	2,400	150	2,250
Water rights	1,739	47	1,692
Drilling	41,157	10	41,147
Geological consulting, exploration & related	7,925	11	7,914
Feasibility, engineering & related studies	19,583	-	19,583
Permits/ environmental	11,630	47	11,583
East deposit underground project			
Underground access, hoist, head frame, power, & related	77,132	246	76,886
Engineering procurement	10,550	-	10,550
Surface infrastructure	3,797		3,797
Site costs	\$12,607	\$454	12,153
	190,481	965	189,516
Amortisation	585	19	566
Capitalised interest	20,713	3,354	17,359
Stock-based compensation	3,702	54	3,648
Total Development Costs	\$215,481	\$4,392	\$211,089

Three months ended March 31, 2016 compared to the three months ended March 31, 2015

For the three months ended March 31, 2016, the Corporation has incurred \$4,392 of project expenditures compared to \$12,041 for the comparable period in 2015. The focus during the period ended March 31, 2015 was to commence lateral development, start an updated feasibility study and a new drill program. In the current period ending March 31, 2016 the focus has been on cost cutting and maintenance of a de-watered shaft.

Drilling costs incurred for the three months through March 31, 2015 were \$1,125; whereas, in the three months ending March 31, 2016 the drilling costs were \$10 because the drilling was completed in 2015.

An updated feasibility commenced in Q1 2015. The spending in Q1 2015 was \$797 in relation to feasibility study work and nil in Q1 2016 as there were no feasibility studies being worked on in Q1 2016.

The underground access costs decreased from \$5,656 in Q1 2015 to \$246 as the focus moved from continuing development to maintenance activities.

Capitalised interest for the three months ending March 31, 2015 was \$2,440 compared to \$3,354 incurred in the three months ending March 31, 2016.

Selected information

<u>(Thousands, except per share amounts)</u>	Three months ended March 31, 2016	Year ended December 31, 2015	Year ended December 31, 2014
Net loss	(12,492)	(4,998)	(17,063)
Net loss per share	(0.16)	(0.06)	(0.21)
Total cash and cash equivalents	1,154	2,217	33,246
Working capital	(135,162)	(119,328)	13,165
Total liabilities	137,553	122,976	107,995
Total assets	226,041	223,953	213,874

Net profit (loss) per share	(0.16)	(0.00)	(0.03)	(0.01)	(0.02)	(0.11)	(0.07)	(0.01)

The loss for the quarter ended December 31, 2014 was higher because of the non-cash finance costs relating to the repayment of the original Red Kite loan facility replaced by the December 30, 2014 Red Kite loan facility.

For the three months ended March 31, 2016, the Corporation had a net loss of \$12,492 or \$0.16 per share compared to a net loss of \$1,992 or \$0.02 per share with the three month period ending March 31, 2015. The difference is primarily related to financing expenses of \$10,000 for the purchase of rights to the off-take agreement and a loss relating to the embedded derivative of the Red Kite loan of \$944.

Liquidity and Capital Resources

As of March 31, 2016, the Corporation had a cash balance of \$1,154, excluding restricted cash. The Corporation's working capital deficiency as at March 31, 2016, was \$135,162 compared with a working capital deficiency of \$37 as at March 31, 2015. The decrease in the Corporation's working capital during the quarter ended March 31, 2016 is primarily due to re-classification of the Red Kite loan from long term to short term and the interest accruing on the Red Kite loan and the interest accruing on the Pala loan. The reclass to short term debt from long term debt was because the Corporation did not meet a covenant under the Red Kite loan agreement requiring them to raise \$20,000 in a finance transaction prior to December 31, 2015. The Corporation is currently in a default position for both the Red Kite Loan Facility and the Pala Loan Facility because the Corporation is not in compliance with the minimum working capital covenants under these facilities. In addition, the Corporation is in a default position under the Red Kite Loan Facility because the Corporation failed to comply with the covenant requiring the Corporation to complete a financing transaction prior to December 31, 2015.

Completion of the Alternate Financing Transaction prior to May 31, 2016 will bring the Corporation into compliance with the Red Kite Loan working capital covenant, the Red Kite Loan financing transaction covenant, and the Pala Facility working capital covenant. When the 2016 Interim Financing Transaction is concluded, the balance sheet loan amounts will also be reclassified back from a current liability to a long term liability.

Transactions with Related Parties

Pala is considered to be a related party because it is a company that holds more than 50% of Nevada Copper shares and three Pala executives, Evgenij Iorich, Stephen Gill, and Michael Brown, are on the Corporation's Board of Directors as at March 31, 2016.

On August 26, 2014, the Corporation closed a \$20 million bridge loan facility with Pala. The initial term of the facility was four months. The Pala Facility has been extended until June 30, 2016 and the total amount of the facility has been increased to \$25 million. The Pala Facility is drawn in \$5 million tranches. Through December 31, 2015, \$20 million has been drawn from the Pala Facility. The annual interest rate is 10% and a 4% arrangement fee was payable upon each tranche drawn. The Pala Facility is secured against the Corporation's assets, and is subordinate to the security granted in connection with the \$200 million senior credit facility announced by the Corporation on December 30, 2014. The Corporation has incurred \$2,609 of interest expense for the Pala Facility of which \$1,099 was paid through December 31, 2015. The Loan is carried at amortised cost on the consolidated condensed interim statement of financial position. The current short term loan carrying value is \$21,595.

As of March 31, 2016, accounts payable and accrued liabilities include director fees and expenses payable of \$4 (December 31, 2015 - \$39), \$4 of which is owed to Pala and a DSU payable of \$833 (December 31, 2015 - \$373), of which \$90 is owed to the related party Michael Brown, \$57 is owed to the previously related party Philip Clegg, and \$57 is owed to the previously related party Michael Barton. The DSUs were granted as part of the compensation package for the directors.

The Corporation has entered into management agreements with certain senior officers. In the event that there is a change of control, the Corporation may be required to pay severance payments ranging from one to three years of salary for these senior officers in the amount of \$1,659 (\$2,155 CAD).

Related party transactions are recorded at the amount paid or received as established by contract or as agreed upon by the Corporation and the related party.

Commitments

Effective May 4, 2006, the Corporation entered into an Option Agreement to acquire a ten-year lease for mining rights (the "Lease") to the Pumpkin Hollow Copper Development Property. The initial lease expires May 4, 2016. The Corporation may extend the Lease for up to three additional terms of ten years each, subject to performing continuous mining activities, payment of advance royalty payments of at least \$3,000 in the first ten-year term and payment of production royalties and minimum royalty payments of \$10,000 in each subsequent ten-year term.

Under the terms of the Lease, the Corporation has made option payments totaling \$600 during the period May 4, 2007 to May 4, 2011.

After May 4, 2011, the Corporation is required to pay advance royalty payments of \$600 annually until the first expiry date of the Lease on May 4, 2016 with a minimum total of \$3,000. Quarterly payments of \$150 are required. The Corporation is current with all required Lease payments and advance royalty payments. Cumulative advance royalty payments made total \$2,400 as of March 31, 2016.

The Corporation was obligated to make exploration and development expenditures on the Property of at least \$4,000 during the first three years of the Lease, with expenditures of at least \$500 each year, and an additional \$4,000 during the 4th through 6th years of the Lease, with expenditures of at least \$500 each year. The Corporation fully satisfied these expenditure obligations by 2008. Pursuant to the terms of the Lease the Corporation notified RGGGS of its intention to extend the lease for the period May 2, 2016 to May 2026. This notice has been acknowledged and accepted by RGGGS. A completion payment of \$450 is payable in June 2016 to finalise the extension of the lease.

The Corporation has entered into a five year lease agreement for offices commencing December 2013. The Corporation has management agreements with certain members of senior management as noted in Transactions with Related Parties. In the event that there is a change of control, the Corporation is committed to pay severance payments equivalent of one to three years of salary.

The following table sets forth the Corporation's known contractual obligations as at March 31, 2016:

Contractual obligations	Payments due by period				
	Total	1 year	2-3 years	4-5 years	5 years +
Lease obligation – payment on Pumpkin Hollow Property	\$10,150	\$600	\$1,200	\$1,200	\$7,150
First amendment to lease – payment of water rights on property (i)	1,783	189	378	198	1,018
City of Yerington – payment of advanced water service payments (ii)	438	88	175	175	-
Accounts payable and accrued liabilities	4,505	4,505	-	-	-
Short-term debt	22,256	22,256	-	-	-
Long-term debt	168,840	125,427	27,212	14,824	1,377
Total USD obligations	\$207,972	\$153,065	\$28,965	\$16,397	\$9,545
	CAD	CAD	CAD	CAD	CAD
Office lease	\$614	\$227	\$387	-	-
Total CAD obligations	\$614	\$227	\$387	-	-

(i) The commitment in the table above is the obligation if the Corporation does not renew the Pumpkin Hollow property lease. The Corporation can pay quarterly installments to the lessor if the lease is renewed.

(ii) The commitment in the table above is the obligation by the Corporation to the City of Yerington for reservation fees.

The Corporation has entered into certain construction and engineering contracts relating to the construction of the underground shaft. Work incurred on these contracts will be billed monthly and therefore are not listed as commitments.

Off-Balance Sheet Arrangements

The Corporation has no Off-Balance Sheet arrangements that are not disclosed in the Commitment section above.

Disclosure Controls and Procedures and Internal Controls over Financial Reporting

The Chief Executive Officer (the "CEO"), and the Chief Financial Officer (the "CFO") of the Corporation are responsible for establishing and maintaining the Corporation's disclosure controls and procedures ("DCP") including adherence to the Disclosure Policy adopted by the Corporation. The Disclosure Policy requires all staff to keep senior management fully apprised of all material information affecting the Corporation so that they may evaluate and discuss this information and determine the appropriateness and timing for public release.

The CEO and the CFO are also responsible for the design of internal controls over financial reporting ("ICFR"). The fundamental issue is ensuring all transactions are properly authorised and identified and entered into a well-designed, robust and clearly understood accounting system on a timely basis to minimise risk of inaccuracy, failure to fairly reflect transactions, failure to fairly record transactions necessary to present financial statements in accordance with IFRS, unauthorised receipts and expenditures, or the inability to provide assurance that unauthorised acquisitions or dispositions of assets can be detected. The relatively small size of the Corporation makes the identification and authorisation process relatively efficient and a process for reviewing ICFR has been developed. To the extent possible given the Corporation's small size, the internal control procedures provide for separation of duties for receiving, approving, coding and handling of invoices, entering transactions into the accounts, writing checks and wire requests and also require two signers on all payments.

The CEO and CFO evaluated the effectiveness of the Corporation's DCP and ICFR as required by NI 52-109 issued by the Canadian Securities Administrators. They concluded that as of March 31, 2016, the Corporation's design and operation of its DCP and ICFR were effective in providing reasonable assurance that material information regarding this report, and the consolidated financial statements and other disclosures was made known to them on a timely basis and reported as required and that the financial statements present fairly, in all material aspects, the financial condition, results of operations and cash flows of the Corporation as of March 31, 2016. The CEO and CFO also concluded that no material weaknesses existed in the design of the ICFR.

The Corporation continually reviews and enhances its system of controls and procedures. However, because of the inherent limitation in all control system, management acknowledges that ICFR will not prevent or detect all misstatements due to error or fraud.

Critical Accounting Estimates

The preparation of the consolidated condensed interim financial statements in accordance with IFRS requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingencies at the date of the consolidated financial statements and the reported amounts of revenues and expenses during the reporting periods. Although these estimates are based on management's expectations for the likely outcome, timing and amounts of events or transactions, actual results could differ from those estimates. Areas requiring the use of management estimates include the determination assumptions used in valuing stock based compensation, valuation of and the determination of the remaining life of mineral property, plant and equipment, estimating future asset retirement obligations and estimating accrued liabilities.

The following are areas where significant estimations or where measurements are uncertain are as follows:

i) Mineral property assets

The measurement and impairment of mineral properties are based on various judgments and estimates. These include the determination of the technical and commercial feasibility of these properties, which incorporates various assumptions for mineral reserves and/or resources, future mineral prices and operating and capital expenditures for the properties.

ii) Taxation

Tax provisions are recognised to the extent that it is probable that there will be future outflow of funds to a taxation authority. Such provisions often require judgment on the treatment of certain taxation matters that may not have been reported to or assessed by the taxation authority at the date of these financial statements. Differences in judgment by the taxation authority could result in changes to actual taxes payable by the Corporation.

Deferred tax assets are recognised to the extent that certain taxable losses or deferred expenditures will be utilised by the Corporation to reduce future taxes payable. The amount of deferred tax assets recognised, if any is based on objective evidence that the Corporation will generate sufficient future taxable income to utilise these deferred assets, as well as the expected future tax rates that will apply to these assets.

Changes to the Corporation's ability to generate sufficient taxable income or changes to enacted tax rates could result in the recognition of deferred tax assets.

iii) Stock-based compensation

The Corporation uses the Black-Scholes option pricing model to determine the fair value of stock options and share purchase warrants granted. This model requires management to estimate the volatility of the Corporation's future share price, expected lives of stock options and future dividend yields. Consequently, there is significant measurement uncertainty in the stock-based compensation expense reported.

Risk Factors

If the Corporation's programs are successful, additional funds will be required for the development of an economic ore body and to place it into commercial production.

The business of mineral exploration and extraction involves a high degree of risk with very few properties that are explored ultimately achieving commercial production. As a mining Corporation in the development stage, the future ability of the Corporation to conduct exploration and development will be affected principally by its ability to raise adequate amounts of capital through equity financings, debt financings, joint venturing of projects and other means. In turn, the Corporation's ability to raise such funding depends in part upon the market's perception of its management and properties, but to a great degree upon the mineral prices and the marketability of securities of speculative mineral exploration and development companies.

The development of any ore deposits found on the Corporation's exploration properties depends upon the Corporation's ability to obtain financing through any or all of equity financing, debt financing, the joint venturing of projects, or other means. There is no assurance that the Corporation will be successful in obtaining the required financing and there is no assurance that the requirements for further drawdowns under the credit Facility will be met.

Risks associated with secured debt.

The Corporation's obligations under the Red Kite Loan Facility and the Pala Bridge Facility are secured against all of the Corporation's assets. Any failure to meet any of the payment obligations under the Red Kite Loan Facility or the Pala Bridge Facility, or otherwise adhere to the covenants therein or fulfill the other obligations thereunder, may trigger an event of default and a demand for full immediate repayment of all amounts outstanding under such credit facilities. The Red Kite Loan Facility contains a covenant to maintain US\$2 million of working capital, and the Pala Convertible Loan Facility contains a covenant to maintain US\$2 million of working capital. The Corporation is currently in default of the minimum working capital covenant contained in the Pala Bridge Facility. It is anticipated that completion of the Prospectus Offering will bring the Corporation into compliance with this covenant. Interest is currently added to the principal amount of the Red Kite Loan Facility, but commencing in 2017 the interest will be payable monthly, with the first interest payment due on January 31, 2017. If the Corporation is not able to further amend the Red Kite Loan Facility and the Pala Convertible Loan Facility, or to refinance such obligations pursuant to its strategic review process, it will need to identify additional sources of financing to satisfy such obligations.

Development projects are uncertain and it is possible that actual capital and operating costs and economic returns will differ significantly from those estimated for a project prior to production

Mine development projects, including the project, require significant expenditures during the development phase before production is possible. Development projects are subject to the completion of successful feasibility studies and environmental assessments, issuance of necessary governmental permits and availability of adequate financing. The economic feasibility of development projects is based on many factors such as: estimation of mineral reserves, anticipated metallurgical recoveries, environmental considerations and permitting, future copper, silver, and gold prices, and anticipated capital and operating costs of these projects. The project has no operating history upon which to base estimates of future production and cash operating costs. Particularly for development projects, estimates of Proven and Probable Mineral Reserves and cash operating costs are, to a large extent, based upon the interpretation of geologic data obtained from drill holes and other sampling techniques, and feasibility studies that derive estimates of cash operating costs based upon anticipated tonnage and grades of ore to be mined and processed, the configuration of the ore body, expected recovery rates of metals from the ore, estimated operating costs, anticipated climatic conditions and other factors. As a result, it is possible that actual capital and operating costs and economic returns will differ significantly from those currently estimated for a project prior to production.

Any of the following events, among others, could affect the profitability or economic feasibility of a project: unanticipated changes in grade and tons of ore to be mined and processed, unanticipated adverse geological conditions, unanticipated metallurgical recovery problems, incorrect data on which engineering assumptions are made, availability and costs of labour, costs of processing and refining facilities, availability of economic sources of power, adequacy of water supply, availability of surface on which to locate processing and refining facilities, adequate access to the site, unanticipated transportation costs, government regulations (including regulations with respect to prices, royalties, duties, taxes, permitting, restrictions on production, quotas on exportation of minerals, environmental), fluctuations in metals prices, and accidents, labour actions and force-majeure events.

It is not unusual in new mining operations to experience unexpected problems during the start-up phase, and delays can often occur at the start of production. It is likely that actual results for the project will differ from current estimates and assumptions, and these differences may be material. In addition, experience from actual mining or

processing operations may identify new or unexpected conditions that could reduce production below, or increase capital or operating costs above, current estimates. If actual results are less favorable than currently estimated, our business, results of operations, financial condition and liquidity could be materially adversely affected.

The Corporation has a lack of operating history and has no history of earnings.

The Corporation and its predecessor companies have no history of earnings. The Corporation has paid no dividends on its shares since incorporation and does not anticipate doing so in the foreseeable future. The only present source of funds available to the Corporation is through the sale of its equity shares or by way of debt facilities. While the Corporation may generate additional working capital through the operation, development, sale or possible syndication of its properties, there is no assurance that any such funds will be generated.

The Corporation is dependent on key personnel and the absence of any of these individuals could result in a significantly negative effect on the Corporation.

The success of the Corporation and its ability to continue to carry on operations is dependent upon its ability to retain the services of certain key personnel. The loss of their services to the Corporation may have a material adverse effect on the Corporation. The Corporation does not presently have “key person” life insurance for any of its officers.

There are significant risks associated with exploration and development activities including industrial accidents, flooding, environmental hazards, technical problems and labour disputes which could materially adversely affect future mining operations and the Corporation’s financial position.

There is no certainty that the expenditures made or to be made by the Corporation in the exploration of its properties will result in discoveries of mineralised material in commercially viable quantities. Most exploration projects do not result in the discovery of commercially mineable ore deposits. Mining operations generally involve a high degree of risk which even with a combination of experience, knowledge and careful evaluation may not be able to overcome. The business of mining is subject to a variety of risks such as industrial accidents, flooding, environmental hazards such as fires, technical failures, labour disputes and other accidents at the mine facilities. Such occurrences, against which the Corporation cannot or may elect not to insure, may delay production, increase production costs or result in liability. The payment of such liabilities may have a material adverse effect on the Corporation’s financial position.

Estimates of Mineral Reserves and Resources may not be realised

The Mineral Reserves and Resources estimates contained in this MD&A are only estimates and no assurance can be given that any particular level of recovery of minerals will be realised or that an identified Resource will ever qualify as a commercially mineable (or viable) deposit which can be legally and economically exploited. The Corporation relies on laboratory-based recovery models to project estimated ultimate recoveries by mineral type. Actual recoveries may exceed or fall short of projected laboratory test results. In addition, the grade of mineralisation ultimately mined may differ from the one indicated by the drilling results and the difference may be material. Production can be affected by such factors as permitting regulations and requirements, weather, environmental factors, unforeseen technical difficulties, unusual or unexpected geological formations, inaccurate or incorrect geologic, metallurgical or engineering work, and work interruptions, among other things. Short term factors, such as the need for an orderly development of deposits or the processing of new or different grades, may have an adverse effect on mining operations or the results of those operations. There can be no assurance that minerals recovered in small scale laboratory tests will be duplicated in large scale tests under on-site conditions or in production scale operations. Material changes in proven and probable reserves or Resources, grades, waste-to-ore ratios or recovery rates may affect the economic viability of projects. The estimated proven and probable reserves and Resources described herein should not be interpreted as assurances of mine life or of the profitability of future operations.

The Corporation’s activities on its properties are subject to environmental regulations, approvals and permits.

All phases of the Corporation’s operations are subject to environmental regulation in the various jurisdictions in which it operates. Environmental legislation is evolving in a manner which will require stricter standards and enforcement, increased fines and penalties for non-compliance, more stringent environmental assessments of proposed projects and a heightened degree of responsibility for companies and their officers, directors and employees. There is no assurance that future changes in environmental regulation, if any, will not adversely affect the Corporation’s operations, or its ability to develop its properties economically. Before production may commence on any property, the Corporation must obtain regulatory and environmental approvals and permits. There

is no assurance such approvals and permits will be obtained on a timely basis, if at all. Compliance with environmental and other regulations may reduce profitability, or preclude economic development of a property entirely.

The Corporation is in competition with other mining companies that have greater resources and experience.

The resource industry is intensely competitive in all of its phases, and the Corporation competes with many companies possessing greater financial resources and technical facilities. Competition could adversely affect the Corporation's ability to acquire suitable producing properties or prospects for exploration in the future.

The business of exploration for minerals and mining involves a high degree of risk, as few properties that are explored are ultimately developed into producing mines.

Mineral exploration is a speculative business, characterised by a number of significant risks including, among other things, unprofitable efforts resulting not only from the failure to discover mineral deposits but from finding mineral deposits which, though present, are insufficient in quantity and quality to return a profit from production. The marketability of minerals acquired or discovered by the Corporation may be affected by numerous factors which are beyond the control of the Corporation and which cannot be accurately predicted, such as market fluctuations, the proximity and capacity of mining facilities, mineral markets and processing equipment, and such other factors as government regulations, including regulations relating to royalties, allowable production, importing and exporting of minerals, and environmental protection, any of which could result in the Corporation not receiving an adequate return on invested capital.

Marketability of natural resources which may be discovered by the Corporation will be affected by numerous factors beyond its control.

The mining industry in general is intensely competitive and there is no assurance that, even if commercial quantities of Mineral Resources are discovered, a profitable market will exist for the sale of such minerals. Factors beyond the control of the Corporation may affect the marketability of any mineral occurrences discovered. The price of minerals has experienced volatile and significant price movements over short periods of time, and is affected by numerous factors beyond the control of the Corporation, including international economic and political trends, expectations of inflation, currency exchange fluctuations (specifically, the United States dollar relative to the Canadian dollar and other currencies), interest rates and global or regional consumption patterns, speculative activities and increased production due to improved mining and production methods.

Some of the directors of the Corporation are involved with other mineral resource companies and may have a conflict of interest in negotiations on a project that is also of interest to the Corporation.

Certain of the directors of the Corporation are directors or officers of other mineral resource companies and, to the extent that such other companies may be interested in a project also of interest to the Corporation, or may in the future participate in one or more ventures in which the Corporation participates, such directors may have a conflict of interest in negotiating and concluding terms respecting such other projects or the extent of such participation. In the event that such a conflict of interest arises, at a meeting of the directors of the Corporation, a director who has such a conflict will abstain from voting for or against the approval of such acquisition or participation. In the appropriate cases, the Corporation will establish a special committee of independent directors to review a matter in which several directors, or management, may have a conflict. From time to time several companies may participate in the acquisition, exploration and development of natural resource properties thereby allowing for their participation in larger programs, permitting involvement in a greater number of programs and reducing financial exposure in respect of any one program.

Title Matters

In those jurisdictions where the Corporation has property interests, the Corporation makes a search of mining records in accordance with mining industry practices to confirm satisfactory title to properties in which it holds or intends to acquire an interest, but does not obtain title insurance with respect to such properties. The possibility exists that title to one or more of its properties, particularly title to undeveloped properties, might be defective because of errors or omissions in the chain of title, including defects in conveyances and defects in locating or maintaining such claims, or concessions. The ownership and validity of mining claims and concessions are often uncertain and may be contested. There is, however, no guarantee that title to the Corporation's properties and concessions will not be challenged or impugned in the future. The properties may be subject to prior unregistered agreements or transfers, and title may be affected by undetected defects.

Shareholder Dilution

It is likely that additional capital required by the Corporation will be raised through the issuance of additional equity securities, resulting in dilution to the Corporation's shareholders.

Share price risk

The market price of a publicly traded stock is affected by many variables not directly related to the success of the Corporation, including the market for all resource sector shares, the breadth of the public market for the stock, the need for certain Funds to sell shares for external reasons other than those relevant to the Corporation and the attractiveness of alternative investments. The effect of these and other factors on the market price of the common shares of the Corporation on the exchanges on which the common shares are listed suggests that the share price will be volatile. In the previous eight quarters, between April 1, 2014 and March 31, 2016, the Corporation's shares traded in a range between CAD\$0.47 and CAD\$2.77 per share.

Insurance risks

Although the Corporation maintains insurance to protect against certain risks in such amounts as it considers to be reasonable, its insurance will not cover all the potential risks associated with a mining Corporation's operations. Nevada Copper may also be unable to maintain insurance to cover these risks at economically feasible premiums. Insurance coverage may not continue to be available or may not be adequate to cover any resulting liability.

Currency risk

The Corporation is exposed to currency fluctuations in the acquisition of foreign currencies. The Corporation holds balances in cash and cash equivalents, accounts payable and accrued liabilities in foreign currencies (CAD dollars) and is therefore exposed to gain or losses on foreign exchange.

Legal Proceedings against Foreign Directors.

The Corporation is incorporated under the laws of British Columbia, Canada, and some of the Corporation's directors and officers are residents of Canada. Consequently, it may be difficult for United States investors to effect service of process within the United States upon the Corporation or upon its directors or officers, or to realise in the United States upon judgments of United States courts predicated upon civil liabilities under the United States Securities Exchange Act of 1934, as amended. Furthermore, it may be difficult for investors to enforce judgments of U.S. courts based on civil liability provisions of the U.S. Federal securities laws in a foreign court against the Corporation or any of the Corporation's non-U.S. resident officers or directors.

Outlook

The Corporation will continue to focus its development efforts in the United States for purposes of the exploring and developing copper projects, in particular Pumpkin Hollow, and acquiring additional copper properties, should opportunities to do so present themselves.

As a development stage Corporation the future liquidity of the Corporation will be affected principally by the level of its development expenditures and by its ability to raise an adequate level of capital through the capital and debt markets. The Corporation will be required to complete additional funding in order to meet its business objectives. The Corporation will continue to evaluate its funding requirements on a go forward basis in an effort to meet its future development and growth initiatives.

Share Data

Capital Structure as of May 16, 2016:

Common shares issued and outstanding:	80,501,458
Total stock options outstanding:	7,390,000
Total warrants outstanding:	nil

Forward-Looking Statements

Certain of the statements made and information contained herein may contain forward-looking information within the meaning of applicable Canadian securities laws. Such forward-looking statements and forward-looking information include, but are not limited to, statements concerning: the Corporation's ability to complete the 2016 Financing Transaction, plans at the Pumpkin Hollow Project; the assumptions in the financial analysis prepared in connection with the FS on the Pumpkin Hollow Project; the timing of granting of any future permits, estimated metal production and the timing thereof; the possibility of future iron magnetite revenues; the possibility of any solar development at the project; any metal pricing, capital and operating and cash flow estimates contained in the FS; and the access to financing and appropriate equipment and sufficient labour. Forward-looking statements or information include statements regarding the expectations and beliefs of management. Often, but not always, forward-looking statements and forward-looking information can be identified by the use of words such as "plans", "expects", "is expected", "anticipated", "is targeted", "budget", "scheduled", "estimates", "forecasts", "intends", "anticipates", or "believes" or the negatives thereof or variations of such words and phrases or statements that certain actions, events or results "may", "could", "would", "might" or "will" be taken, occur or be achieved. Forward-looking statements or information include, but are not limited to, statements or information with respect to known or unknown risks, uncertainties and other factors which may cause the actual industry results, to be materially different from any future results, performance or achievements expressed or implied by such forward-looking statements or information.

Forward-looking statements or information are subject to a variety of risks and uncertainties which could cause actual events or results to differ from those reflected in the forward-looking statements or information, including, without limitation, risks and uncertainties relating to: history of losses; requirements for additional capital; dilution; loss of its material properties; interest rates increase; global economy; no history of production; future metals price fluctuations, speculative nature of exploration activities; periodic interruptions to exploration, development and mining activities; environmental hazards and liability; industrial accidents; failure of processing and mining equipment to perform as expected; labour disputes; supply problems; uncertainty of production and cost estimates; the interpretation of drill results and the estimation of mineral resources and reserves; legal and regulatory proceedings and community actions; title matters; regulatory restrictions; permitting and licensing; volatility of the market price of Common Shares; insurance; competition; hedging activities; currency fluctuations; loss of key employees; as well as those factors discussed in the section entitled "Risk Factors" in this MD&A and the Corporation's Annual Information Form dated March 22, 2016. Should one or more of these risks and uncertainties materialise, or should underlying assumptions prove incorrect, actual results may vary materially from those described in forward-looking statements or information. Accordingly, readers are advised not to place undue reliance on forward-looking statements or information. The Corporation disclaims any intent or obligation to update forward-looking statements or information except as required by law, and you are referred to the full discussion of the Corporation's business contained in the Corporation's reports filed with the securities regulatory authorities in Canada.
