NEVADA COPPER CORP.

QUARTERLY REPORT FOR THE THREE MONTHS ENDED SEPTEMBER 30, 2013

NEVADA COPPER CORP.
Management's Discussion & Analysis
For the three months ended September 30, 2013

General

This Management's Discussion and Analysis ("MD&A") of Nevada Copper Corp. (the "Corporation" or "Nevada Copper") has been prepared by management as of November 5, 2013 and should be read in conjunction with the Corporation's consolidated annual financial statements and related notes for the year ended June 30, 2013 which have been prepared in accordance with International Financial Reporting Standards ("GAAP" or "IFRS" as issued by the International Accounting Standards Board ("IASB")). The information contained within this MD&A is current to November 5, 2013.

Unless otherwise noted, comparative financial information contained in this MD&A has been prepared in accordance with IFRS. All amounts are expressed in thousands of US Dollars unless otherwise indicated. Additional information relevant to the Corporation's activities can be found on SEDAR at www.sedar.com.

Description of Business

Nevada Copper Corp. (the "Corporation" or "Nevada Copper") is a mining company engaged in the development of the Pumpkin Hollow copper project.

Nevada Copper was incorporated on June 16, 1999 under the Business Corporations Act of the Yukon as African Venture Corporation and changed its name to Astron Resources Corporation on July 26, 1999, and subsequently to Nevada Copper Corp. on November 16, 2006. The Corporation's common shares are listed on the Toronto Stock Exchange ("TSX") under the symbol "NCU".

The principal asset of the Corporation is a 100% interest in the Pumpkin Hollow property located in north-western Nevada, approximately ninety road miles southeast of Reno. The property consists of a contiguous 26 square mile land package held by the Corporation comprising both patented and unpatented claims.

Highlights

On October 28, 2013 the Corporation announced the appointment of Timothy Arnold as Vice President of Operations of the Company, and several other additions to the Company's technical team.

On October 9, 2013 the Corporation received the second tranche of $15 million pursuant to the $200 million senior secured loan facility and copper concentrate off-take agreement. This facility is between Nevada Copper and a special purpose vehicle that is jointly owned by Orion Resource Partners and RK Mine Finance.

The advance of $15 million was predicated upon receipt of the key State and County permits of which the last permit was received on September 9, 2013 and allows for the continuation of construction of the underground mining operation. A total of $51 million has been received from this facility with a further $149 million to be received in early Q3-2014 on the completion of certain other project milestones, including completion of the 24 foot diameter, 2,140 foot deep production-sized shaft.

A press release issued on October 3, 2013 published the results of a stand-alone open pit mine development relating to the North and South deposits. The Corporation will file the open pit feasibility on SEDAR in November. The stand alone open pit feasibility study confirms the technical and economic viability of constructing and operating a stand-alone 70,000 ton-per-day open pit copper mining and processing operation. The Stage 2 Open Pit Operation would be located approximately four kilometers west of the underground mine that is currently under construction.

The Corporation announced the execution of a $24 million equipment finance facility ("Equipment Financing") with Caterpillar Financial Services Corporation ("Cat Financial") on October 1, 2013. The Equipment Financing forms part of the overall project capital funding package for Nevada Copper's Stage 1 Underground Operation, currently under construction.

On September 9, 2013 the Corporation received its Nevada Air Quality Operating Permit. This was the final permit needed for construction and operation of the Stage 1 underground project. The Pumpkin Hollow underground project is now fully permitted for mine construction and operations.

On August 8, 2013 the Corporation appointed Michael Brown as an independent director. Mr. Brown is a registered Professional Engineer graduating from the University of the Witwatersrand with a B.Sc. in Mining Engineering with Honors. Mr. Brown has extensive mining background working in progressively senior positions at De Beers Consolidated Mines Ltd. Mr. Brown is currently working as a Senior Vice President at Pala Investments Limited ("Pala").

The Corporation received its Water Pollution Control Permit on August 23, 2013. The Lyon County Special Use Permit was approved on June 20, 2013. Approval of the Special Use Permit is considered an extremely critical milestone and confirms that there is overwhelming local support for the project. The Corporation received their Reclamation Permit on June 7, 2013 for the Stage 1, Private Land Underground Mine ("PLUM"). This is one of the key permits for the project that establishes decommissioning, closure and reclamation conditions and financial assurance for the construction of an underground mining operation at the Pumpkin Hollow Project.

On March 28, 2013 the Corporation closed a $200 million senior secured loan facility (the "Loan Facility") and copper concentrate off-take (the "Concentrate Off-Take") agreement with MF Investment Holding Company 2 (CAYMAN) SPC, a special purpose vehicle jointly owned by Orion Resource Partners and RK Mine Finance ("Red Kite"). Proceeds from the Loan Facility will be used for construction of Nevada Copper's underground mining operation at its 100% owned Pumpkin Hollow copper project located near Yerington, Nevada.

A summary of the Loan Facility and Concentrate Off-Take terms are as follows:

- $36 million was paid to Nevada Copper. This cash amount provides the Corporation to continue current shaft sinking activities, commence detailed engineering and secure long lead time equipment;

- $15 million was paid on receipt of State permits allowing for the commencement of full construction of an underground mining operation. This funding was received October 9, 2013.;

- $10 million will be advanced on passage of the Lyon County Bill (the "Land Bill") and land conveyance to the City of Yerington. This bill was introduced on a bi-partisan basis in both the Senate and U.S. House of Representatives. Passage of this bill does not affect the development timeline of the underground mining operation;

- $139 million ($149 million should passage of the land bill be delayed) will be advanced on the completion of certain other project milestones, including completion of the 24 foot diameter, 2,140 foot production sized shaft;

- The Loan Facility has a six year term maturing on January 3, 2019, with interest payable at an annual rate of LIBOR plus 6% with a minimum interest rate of 7%. The loan and interest are repayable in equal quarterly installments commencing April 2015, and mandatory prepayments equal to 20% of excess cash, as defined in the Loan Facility are required. The Corporation has the ability in certain circumstances to repay the loan in full without penalty prior to maturity. The loan is secured against all current and future assets of the Corporation and its subsidiaries. As part of the loan agreement, the Corporation has paid an origination fee of 3% of the total principal amount of the loan; and,

- Under the terms of the Concentrate Off-Take agreement, the Corporation will sell to Red Kite, for the life of the mine on the Eastern underground deposits (East & E2 underground mineable deposits and JK34 zone), a percentage of copper concentrates produced from the Eastern deposits on the Pumpkin Hollow project equal to the amount advanced by Red Kite to the Corporation under the loan agreement as a percentage of the $200 million maximum principal amount of the loan.

  The Concentrate Off-Take agreement does not include any rights to future copper concentrate production from the open-pittable North and South deposits and provides for benchmark-referenced treatment and refining charges, and standard payment factors for contained copper, gold and silver.

A press release issued on November 19, 2012 published the results of a stand-alone underground mine development. Subsequent to the press release in December 2012, the Corporation filed on SEDAR a feasibility study related to an underground mine development focused on the East deposit. This feasibility study builds upon two previous Preliminary Economic Assessments and a previous feasibility study published in February 2012. This feasibility study confirms the technical and financial viability of constructing and operating an underground mine development of the East deposit, with ore hoisted to surface by way of a 24 foot diameter production shaft to an associated 6,500 ton per day processing facility. The East mine development footprint is confined to patented private claims and requires only Nevada State permits - no Federal permits are required. The final State permit was issued in September 2013. The underground feasibility study was prepared by Tetra Tech. As Nevada Copper moves forward with a staged development approach, the Stage one underground operation will be followed by a Stage two development of the large open pit operation on the North and South deposits ("Western Deposits").

On October 9, 2012 the Corporation announced that it had completed the purchase of 46,000,000 common shares of Mercator Minerals Ltd. ("Mercator") from Pala, a major shareholder of the Corporation. At the time of this announcement, this represented approximately 17.8% of the issued and outstanding common shares of Mercator. Consideration for purchase of the Mercator shares was the issuance of 7,315,000 common shares of the Corporation to Pala. The Corporation's percentage ownership of Mercator declined to approximately 14.6% as a result of the private placement for 55,775,000 common shares at a price of $0.52 per common share which closed on October 23, 2012. Nevada Copper purchased the Mercator Shares for investment purposes. Depending upon market conditions and other factors that Nevada Copper may deem material, the shares currently owned by Nevada Copper may be held, or sold in the open market or in private transactions.

On September 7, 2012 the Corporation announced an updated National Instrument ("NI") 43-101 mineral resource estimate for its 100% owned Pumpkin Hollow Property in Nevada. The updated mineral resource estimate includes the results of approximately 44,000 meters of resource delineation drilling completed since October, 2010. The associated NI 43-101 Technical Report was SEDAR-filed on October 19, 2012.

The following are highlights of the new mineral resource estimate, compared to the previously published January 2011 resource estimate. The new resource estimate is based on drill results from October 2010 to August 2012.

- The M&I copper resources for the Western Deposits increased by 26% an increase of 1.1 billion pounds to 5.4 billion pounds (0.15% cutoff);
- The M&I copper resources in the North Deposit increased by 820 million pounds to 3.5 billion pounds (0.15% cutoff) a 30% increase in the copper resource
- The M&I copper resources in the South Deposit increased by 315 million pounds to 1.9 billion pounds (0.15% cutoff) a 20% increase in copper resources;
- 1.1 billion pound increase of total M&I copper resource to 6.8 billion pounds for the combined Western and Eastern Deposits from 5.7 billion pounds (0.15% cutoff - Western Deposits; and 0.75% cutoff -- Eastern Deposits);
- Total Inferred copper resource of 1.7 billion pounds for combined Western and Eastern Deposits (0.15% cutoff - Western Deposits and 0.75% cutoff - Eastern Deposits);
- 16% Increase of the M&I Iron Resource for the Western Deposits increasing by 17.8 million tons to 129 million tons of contained iron (20% cutoff); and,
- Significant Increase in the Inferred Iron Resource for the Western Deposits increasing by 19.9 million tons to 27.6 million tons of contained iron (20% cutoff).

The details of tonnage and grades for the Western Deposits are contained in the resource tables commencing on page 7 of this document. Since October 2010 the Eastern Deposits received limited drilling mainly along the edges of the deposits representing only 6% of the total drilling completed. As a result, the Eastern Deposits mineral resources have not been updated and are reported below as previously published.

Pumpkin Hollow Copper Project

Pumpkin Hollow is an advanced stage copper project located near Yerington, Nevada. Since acquiring the property in 2006, the Corporation has embarked on an aggressive development program to advance the project. During 2007, a 19,000 meter drill program was completed and, in November 2007, the Corporation completed an updated independent National Instrument 43-101 ("NI 43-101") compliant resource estimate, with copper and iron resources increasing and gold and silver being added to the resource. On March 17, 2008, the Corporation completed a

Preliminary Economic Assessment ("PEA") of its Pumpkin Hollow property in accordance with NI 43-101. The PEA was filed on SEDAR on April 3, 2008.

In 2008, the Corporation completed a drilling program totaling over 26,000 meters of resource, geotechnical and hydrological drilling and 16,000 meters of re-assaying the historic drill core.

An updated resource estimate in accordance with NI 43-101 was completed in July 2009 adding copper, gold, silver and iron resources and showing a substantial increase in the Measured and Indicated categories. As a result of these increases in the resource estimate, the Corporation updated its PEA in December 2009. The updated PEA was filed on SEDAR on January 13, 2010.

During December 2009, the Corporation announced the commencement of a Pre-Feasibility Study. On the basis of the engineering done as part of the pre-feasibility study, the Corporation announced on November 2010 that it was proceeding directly to a definitive Feasibility Study with all pre-feasibility engineering work to be incorporated into the FS. The Corporation announced the results of its FS on January 23, 2012.

Permits and Land Transfer

The Pumpkin Hollow project is located on private land and unpatented mining claims located on Bureau of Land Management administered federal lands. The City of Yerington (the "City") has proposed to acquire Federal Lands comprising a land area of 10,300 acres (the "Land Transfer"). Nevada Copper has agreed to collaborate with the City to support the Land Transfer. If successful, the Land Transfer would convey all Federal Lands associated with the project from BLM jurisdiction to the City. This would allow the City to receive a portion of both property tax and Nevada net proceeds tax. It would also provide additional lands around the project for sustainable development, including current and long-term, post-mining commercial and industrial development, recreational opportunities, and expansion of community and cultural events. Subject to successful completion of the Land Transfer, all permitting would come under the jurisdiction of the State of Nevada and the City, with receipt of project construction permits still targeted for 2013.

The Land Transfer process involves passage of a bill in the U.S. Congress. On a bi-partisan collaborative basis, Senator Majority Leader Harry Reid and Senator Dean Heller re-introduced the Lyon County Bill as Senate Bill S. 159, into the U.S. Senate on January 28, 2013. In addition, on February 14, 2013 the Lyon County Bill was introduced to the House of Congress as House Bill H.R. 696, on a bi-partisan basis co-sponsored by Congressman Stephen Horsford and Congressman Mark Amodei.

In U.S. House of Representatives, the Lyon County Bill was heard in the Subcommittee on Public Lands and Environmental Regulation on Thursday, April 18, 2013. In the Senate, the Lyon County Bill was heard in the Senate Public Lands Subcommittee on April 25, 2013. The Senate Committee on Energy and Natural Resources passed the Lyon County Economic Development and Conservation Act on June 18, 2013.

In the event the Land Transfer is not completed as planned, the project activities related to a larger open pit development would require a Plan of Operations to be filed with the BLM and preparation of an Environmental Impact Statement ("EIS") pursuant to BLM guidelines.

Regardless of the land status and permit process, the environmental, engineering and baseline technical studies associated with the entire project are in progress and will be completed in conformance with all Federal, State and local standards. That assures that the project is designed, constructed and operated to meet those standards and that either permitting process, including preparation of an EIS, would not be delayed. If BLM approval is required, BLM process and State permits for the project would be expected to be complete in early 2015.

With regard to water rights, Nevada Copper has obtained rights covering 100% of its anticipated Pumpkin Hollow project water needs including the large Stage two open pit project. Notably, the entire project area is outside of irrigated lands in Mason Valley. Detailed studies have demonstrated that groundwater in the mine project area is not hydraulically connected to the alluvial aquifers in Mason Valley and project operations will not impact that important aquifer.

Development Schedule
An underground contractor was selected in December 2011 after a detailed review of several proposals for purposes of sinking of a 2,140 foot, 24-foot diameter production-sized shaft to access the East underground deposit. The sinking of the shaft commenced on February 18, 2012. All permits to allow for shaft sinking and construction were received in April 2011.

Conditional on several factors, including securing the land transfer and project financing, detailed engineering and ordering of key long-lead-time mining and process equipment started in the first half of 2013. Production from the underground project is expected to commence by mid-2015.

For the Stage two open pit project, pre-stripping the North Deposit and construction of the mill and related facilities could occur in 2014 once permits are obtained. Subject to permits and financing, production is anticipated to commence as early as 2016 from the Stage two project.

The surface facilities at the East shaft site are essentially mechanically complete, commissioning commenced in May 2013. These facilities include a production-sized head-frame and a twelve foot diameter double drum hoist. The 24 foot diameter, 2,140 foot production shaft, which will be concrete-lined, has been developed past the 99 foot "pre-sink" level, allowing work to proceed on the shaft sub-collar and head-frame foundations, head-frame erection and hoist commissioning. Dump chutes and related equipment have been installed. Installations of cable tray, lighting and door and dump controls, as well as utilities in the shaft sub-collar, are complete.

The hoist, the hoist house building, and the hoist control room have all been commissioned. Hoist commissioning allowed for resumption of shaft sinking which is expected to continue through 2013. Detailed mine design work is underway for the high-grade East deposit to provide the framework for mine planning.

Pumpkin Hollow Mineral Resources

The project mineral resource estimate for the Western deposits is an update of a previous mineral resource estimate disclosed on September 7, 2012 and filed on SEDAR. The current estimate was disclosed October 3, 2013 and the related NI 43-101 Technical Report will be filed in November 2013 within the required statutory period. The Eastern underground deposit resources had a non-material amount of drilling and were left unchanged. The associated NI 43-101 technical report was filed on SEDAR on October 19, 2012 and is available on the company's website. The estimates were prepared by the mineral resource and mining division of Tetra Tech by, or under the direction of, Dr. Rex Bryan, SME Registered Member, an independent Qualified Person as set forth by NI 43-101.

The expansion of the North deposit and the South deposit has merged the two open pits together with benefits in terms of a greater mineable reserves and operational synergies.

WESTERN DEPOSITS – MEASURED AND INDICATED RESOURCES - AS AT OCTOBER 2013

Category	Cutoff Grade (%Cu)	Tons (000)	Grade (%Cu)	Contained Copper (000 lbs)	Gold Grade opt	Gold (000 ozs)	Silver Grade opt	Silver (000 ozs)	Cu Equiv. %

Mineral resources that are not categorized as mineral reserves have not demonstrated economic viability.

EASTERN DEPOSITS - INFERRED RESOURCES - AS AT MARCH 2011

Category	Cutoff Grade (%Cu)	Tons (000)	Grade (%Cu)	Contained Copper (000 lbs)	Gold Grade opt	Gold (000 ozs)	Silver Grade opt	Silver (000 ozs)	Cu Equiv. %
Inferred	1.00	4,926	1.45	143,313	0.002	10	0.101	498	1.51
Inferred	0.75	12,098	1.11	267,533	0.002	24	0.065	792	1.16

Copper equivalency is based on $3.00 per pound for copper, $1400 per ounce gold and $20 per ounce silver and metallurgical recoveries of 92%, 78% and 57.5% for copper, gold and silver respectively.

Mineral resources that are not categorized as mineral reserves have not demonstrated economic viability.

Pumpkin Hollow Mineral Reserves

Proven and Probable mineral reserves are the economically-mineable portions of the Measured and Indicated mineral resources above.

East Underground Deposit

The mineral reserves for the East and E2 underground deposits are supported by a Technical Report made public in January 2012 and filed on SEDAR. The mineral reserves stated below for the underground deposits are based on the measured and indicated mineral resources disclosed in the January 2011 news release, and do not yet reflect the increased mineral resources for the Western Deposits as disclosed on September 7, 2012.

Mineral Reserves East Underground Deposit January 2012								
Classification	**Ore**	**Copper**	**Gold**	**Silver**	**Contained Copper**	**Contained Gold**	**Contained Silver**	**Copper Equiv.**
	000's tons	**%**	**Oz./ton**	**Oz./ton**	**Billion lbs.**	**Ozs.**	**Ozs.**	**%**
Proven	10,979	1.55	0.011	0.215	0.34	120,769	2,360,485	1.81
Probable	16,666	1.45	0.006	0.141	0.48	99,996	2,349,906	1.60
Proven & Probable	**27,645**	**1.49**	**0.008**	**0.170**	**0.82**	**220,765**	**4,710,391**	**1.68**

The mineral reserves and mine plans for the underground East and E2 deposits were determined using cutoff grades developed by Tetra Tech as appropriate for the mining method and costs associated with the deposits. For the underground deposits the cutoff grade used was 0.8% copper. A copper price of $3.00 per pound was assumed. Tetra Tech is the independent Qualified Person who is responsible for the mineral reserve estimate. The copper equivalency was determined using Base Case metals prices and metallurgical recoveries of 89.3%, 67.3% and 56.3% for copper, gold and silver respectively.

E2 Underground Deposit

The E2 underground deposit contains a mineral reserve that was originally disclosed in a NI 43-101 Technical Report filed on SEDAR on February 7, 2012. The E2 deposit was included in the mine production plan in the aforementioned feasibility study along with mine production from the East deposit and the Western Open Pit deposits. These ore streams will feed a single large concentrator.

Mineral Reserves E2 Underground Deposit January 2012								
Classification	**Ore**	**Copper**	**Gold**	**Silver**	**Contained Copper**	**Contained Gold**	**Contained Silver**	**Copper Equiv.**
	000's tons	**%**	**Oz./ton**	**Oz./ton**	**Billion lbs.**	**Ozs.**	**Ozs.**	**%**
Proven	1,387	1.83	0.009	0.236	0.05	12,236	327,404	2.06
Probable	6,745	1.62	0.006	0.176	0.218	38,685	1,185,457	1.77
Proven & Probable	**8,132**	**1.65**	**0.006**	**0.186**	**0.269**	**50,920**	**1,512,862**	**1.82**

The mineral reserves and mine plans for the underground East and E2 deposits were determined using cutoff grades developed by Tetra Tech as appropriate for the mining method and costs associated with the deposits. For the underground deposits the cutoff grade used was 0.8% copper. A copper price of $3.00 per pound was assumed. Tetra Tech is the independent Qualified Person who is responsible for the mineral reserve estimate. The copper equivalency was determined using Base Case metals prices and metallurgical recoveries of 89.3%, 67.3% and 56.3% for copper, gold and silver respectively.

The E2 reserve was not included in the mine production plan disclosed in a more recent Feasibility Study that was disclosed in a NI 43-101 Technical Report filed on SEDAR on December 12, 2012. This study focused only on ore production from the East deposit and deferred development of the E2 deposit; however it is management's intention to incorporate E2 ore production into future mine plans.

Western Open Pittable Deposits

The mineral reserves stated below for the North and South open pit deposits is an update of the previously published measured and indicated mineral resources as of September 2012. The Feasibility Study results as disclosed in the October 3, 2013 news release. The related NI43-101 Technical Report will be filed in November 2013 within the required statutory period.

Mineral Reserves North & South - Open Pit Deposits October 2013								
Classification	**Ore**	**Copper**	**Gold**	**Silver**	**Contained Copper**	**Contained Gold**	**Contained Silver**	**Copper Equiv.**
	000's tons	**%**	**Oz./ton**	**Oz./ton**	**Billion lbs.**	**Ozs.**	**Ozs.**	**%**
Proven	204,182	0.409	0.0015	0.052	1.67	306,610	10,685	0.44
Probable	344,004	0.358	0.0012	0.047	2.46	410,920	16,009	0.39
Proven & Probable	**548,186**	**0.377**	**0.0013**	**0.048**	**4.13**	**717,530**	**26,694**	**0.40**

The mineral reserves and mine plans for each of the open pit deposits was determined using cutoff grades developed by Tetra Tech as appropriate for the mining method and costs associated with the deposits. For the open pit North and South deposits the cutoff grade used was 0.175% and 0.179% copper respectively. The breakeven cutoff was calculated using $2.80 mining cost while the internal cutoff was calculated using $3.00 copper. Ed Lips, Principal Mining Engineer for Tetra Tech is the independent Qualified Person who is responsible for the mineral reserve estimate. The copper equivalency was determined using Base Case metals prices and metallurgical recoveries of 89.3%, 67.3% and 56.3% for copper, gold and silver respectively.

Iron Mineral Resource

The Pumpkin Hollow project has considerable resources of iron in the form of magnetite. The following tables include only those iron resources amenable to open-pit mining methods in the Western deposits. Possible mining, recovery and sale of a magnetite concentrate will be considered in an updated feasibility study.

Iron Resources – September 2012				
Category	**Iron Cut-off**	**Tons**	**Iron Grade**	**Tons Iron**
	%	**(000's)**	%	**(000's)**
Measured	20	242,957	32.8	79,738
Measured	30	133,890	39.4	52,737
Indicated	20	152,265	31.0	47,216
Measured	30	98,065	39.0	26,566
M&I Total	**20**	**395,222**	**32.1**	**126,954**
M&I Total	**30**	**231,955**	**39.1**	**79,303**

Inferred	30	39,392	39.5	15,556

* Tonnage, grades and totals may not total due to rounding

Mineral resources that are not categorized as mineral reserves have not demonstrated economic viability.

The iron mineral resource estimate was disclosed in Nevada Copper's October 3, 2013 News Release. The associated NI 43-101 technical report will be filed on SEDAR within the required statutory period.

If an updated feasibility study demonstrates the iron resource to be economically viable, inclusion of iron in the open pit block model values is expected to significantly expand the size and tonnage of the North and South open pits, and lower waste tonnages and strip ratio.

Tailings Storage

To minimize water usage, tailings will be de-watered, filtered and conveyed to a "dry-stack" on-site storage facility. This water is then recycled to the process plant. This method is considered "best practice" for long term tailings storage in dry environments with limited water resources. It also lowers long-term environmental monitoring costs associated with tailings dams.

Infrastructure

The project area is well supplied with nearby local infrastructure. Project-related infrastructure expenditures include a new 120kV power line and related substation, with the line routed from either the west or east depending on whether the Land Bill is successfully passed. An energy cost of $0.055/kwh was used for FS purposes, based on NV Energy expected rates. For the larger Stage 2 project, a new 5-mile (8 km) mine access road will connect the site to state Highway 95 to the North, and a rail load-out facility located on Union Pacific tracks. The rail tracks run approximately 13 miles (21 km) north of the project and connect with Union Pacific mainline tracks for connection to west coast ports. Process make-up water will be piped 6 miles (10 km) from the City of Yerington, county seat for Lyon County, where housing and regional services are available and most employees are expected to reside. The communities of Silver Springs, Smith Valley, Fernley, Dayton, Fallon, Carson City and Hawthorne are also all within commuting distance, and have a labor pool and existing housing, particularly for a construction workforce.

Project Opportunities

Project opportunities in the near term to further enhance the economic value of the Pumpkin Hollow project will be included in an updated feasibility study which is targeted for completion in Q3-2013 and would reflect the following:

Iron

Work by specialist consultants has been initiated to further assess the metallurgy and marketability of the Pumpkin Hollow iron magnetite resources, to incorporate the iron values into the project block models, to revise the current mining plans to generate an iron production schedule and to include the additional revenues from this source in the revised project cash flows. The inclusion of iron values in the block model is expected to greatly improve strip ratios since much of what is now considered open pit waste material would have sufficient value to be processed through the mill facility.

Resource expansion

Whittle pit analysis utilizing the updated mineral resource is expected to produce a mine design where the North and South pits will intersect based on copper values alone. A merged pit configuration is expected to have a positive effect on the strip ratio, as well as improvements in pit scheduling and equipment utilization. Results from the additional drilling in 2013 have provided good indications of further resource expansion in the south and western portion of the North deposit.

Feasibility Study Qualified Persons

In November 2010 Nevada Copper commissioned Tetra Tech to complete the Pumpkin Hollow Project Feasibility Study in accordance with NI 43-101. The initial capital costs estimates for the Pumpkin Hollow Project in the FS were compiled and reviewed by Merit under the direction of Jay Collins, P. Eng. The scientific and technical information in this release has been reviewed and approved by Erik Spiller, Q.P., Vice President, of Tetra Tech, and overall manager for the FS, and by Mr. Collins both of whom were Independent Qualified Persons within the meaning of NI 43-101, at the time of this study.

The results of a Feasibility Study evaluating a Stage 1 underground operation were announced on November 12, 2012. The related NI43-101 Technical Report was SEDAR-filed on December 13, 2012. The Technical Report was developed under the guidance Mr. Ed Lips, P.E., Project Manager with Tetra Tech, and overall manager for the Feasibility Study. Mr. Lips is an Independent Qualified Person within the meaning of NI 43-101.

The results of a Feasibility Study evaluating a Stage 2 open pit operation focused on the Western Deposits were announced on October 3, 2013. The related NI43-101 Technical Report will be SEDAR-filed within the required 45 days statutory period. The results of the Stage 2 Feasibility Study were reviewed by Mr. Ed Lips, P.E., Project Manager with Tetra Tech, and overall manager for the Feasibility Study. Mr. Lips is an Independent Qualified Person within the meaning of NI 43-101.

Alternative Performance Measures

"Copper Production Costs", "LOM Operating Costs", "LOM site unit operating costs" and similar terms are alternative performance measures. These performance measures are included because these statistics are key performance measures that management may use to monitor performance. Management may use these statistics in future to assess how the Corporation is performing to plan and to assess the overall effectiveness and efficiency of mining operations. These performance measures do not have a meaning within International Financial Reporting Standards and, therefore, amounts presented may not be comparable to similar data presented by other mining companies. These performance measures should not be considered in isolation as a substitute for measures of performance in accordance with IFRS.

STAGE 1 PRIVATE LAND UNDEGROUND MINE (PLUM) FEASIBILITY STUDY
Highlights
(All amounts are stated in United States dollars):

The following sections are summarized extracts from a feasibility study contained in a NI 43-101 Technical Report relating to a standalone PLUM. A press release dated November 19, 2012 initially reported the results of the feasibility study. The Technical Report was filed on SEDAR on December 12, 2012.

- The project development consists of a 6,500 ton-per-day underground operation at the East deposit, feeding a single 6,500 ton-per-day concentrator located near the East shaft;

- First production targeted for early 2015, with an initial mine life of 12 years;

- Proven and Probable Mineral Reserves (East deposit only):

  823 million pounds of copper
  220,765 ounces of gold and 4.7 million ounces of silver;

- LOM metal production contained in concentrates totals

  759 million pounds of copper
  167,439 ounces of gold and 2.7 million ounces of silver;

- Average annual copper production in concentrates:

Years 1 to 5:	74.6 million pounds per year
Years 1 to 10:	66.9 million pounds per year

- Average annual gold and silver production in concentrates.

Years 1 to 5:	23,700 ozs gold per year
Years 1 to 10:	15,900 ozs gold per year
Years 1 to 5:	340,100 ozs silver per year
Years 1 to 10:	248,600 ozs silver per year

- Initial capital costs are estimated to be $329 million including contingency, excluding working capital of $15.4 million and excluding approximately $17 million already expended for shaft related activities. A further $40 million will be allocated from current cash on hand to fund future capital costs.

- LOM site operating costs are $41.46 per ton of ore-milled. Copper production costs, net of gold and silver revenue credits are:

Year 1 to 5:	$1.21 per pound of payable copper
Years 1 to 10:	$1.51 per pound of payable copper

- Summary of Economic Results:

1. Base Case: Three year trailing average price of $3.59/lb. copper, $1,419/oz. gold and $27.14/oz. silver:
   NPV at 5% is $419 million, pre-tax.
   NPV at 8% is $309 million, pre-tax.
   Internal Rate of Return is 28.6% and payback is 2.5 years.

2. Alternate Case: Quoted copper forward prices to 2022 then long term price of $2.75/lb. copper; gold and silver same as Base Case:

   NPV at 5% is $276 million, pre-tax.

NPV at 8% is $201 million, pre-tax.
Internal Rate of Return is 24.3% and payback is 2.7 years.

3. Average annual operating cash-flow (Years 1 to 5):

Base Case:	$149 million.
Alternate Case:	$139 million.

PLUM Development Schedule

The shaft production-sized headframe and hoist became operational in May 2013 and since then have been used to advance shaft sinking to the 510 foot level as of November 5, 2013. Completion of the bare shaft is targeted for Q3 2014. Production of first copper concentrates is targeted for 2015.

PLUM Mining

All underground production (6,500 tons per day) will come from the East deposit only. Longhole stoping with paste backfill was chosen to be the mining method. The tonnage requirement of 6,500 tons per day called for a bulk mining method. Rock quality was high enough to support large open stopes which will require structural backfill. The rock quality was too high for a "block caving" method to be considered. Once mined, ore will be hauled from the stope and delivered to a run-of-mine surge bin which feeds into an underground jaw crusher. One surge bin and jaw crusher is planned. Development waste will be stored in a drift adjacent to the surge bin and fed into the crusher at pre-determined intervals. Once crushed, the material will be transferred by conveyor to the shaft loading pocket where it will be measured, loaded into skips and hoisted to the surface.

Underground mining methods and the mining sequence were developed to maximize grades in the early production years to the extent possible. Underground development will be way of a 24 foot diameter production-sized shaft. Vent and secondary egress shafts will be constructed as required.

PLUM Process Plant

Ore will be crushed underground, hoisted to surface and transported to a nominal 6,500 tons per day concentrator located approximately 1,500 feet northwest of the shaft. The concentration circuit is conventional with a single, semi-autogenous grinding mill, secondary ball mill grinding and flotation, followed by thickening and pressure filtration to produce a final concentrate grading 24% copper and containing payable gold and silver. Primary grind size is 100 microns with projected metallurgical recoveries of 92.1%, 78% and 57.5%, for copper, gold and silver respectively.

PLUM Metals Production

Projected recovered metals production to the copper concentrate is summarized below. LOM copper recovered to concentrates is estimated to be 759 million pounds.

	Units	Yrs 1-5 Average	Yrs 1-10 Average	LOM Total
Mill Feed	000s tons/yr; 000s tons	2,290	2,302	27,645
Copper Grade	%	1.77%	1.58%	1.49%
Copper Production in Concentrates	Million lbs./year	74.6	66.9	759,082
Copper Concentrates Production	tonnes/yr; tonnes	140,900	126,391	1,434,656
Gold in Concentrates	Ozs./year; ozs.	23,744	15,942	167,439
Silver in Concentrates	Ozs./year; ozs.	340,090	248,597	2,709,187

Annual operating cashflow averages $149 million in the first five years of production assuming the base metal price scenario.

PLUM Capital Costs

PLUM project initial capital costs are estimated at $329 million, with an accuracy of plus/minus 15% as of November 2012, including a contingency of $25.5 million. The contingency allowance is calculated based on assessed factors for each of the major Direct and Indirect cost categories.

The major direct cost items include: underground mine development on the East deposit, process plant, tailing storage facility, and site infrastructure. Indirect costs include such major areas as engineering and procurement, construction management, freight and commissioning, spares inventory, first fills, and Owners Costs.

PLUM Sustaining Capital

Sustaining capital totals $221.6 million, and includes ongoing underground mine development & equipment replacement, and expenditures for expansion of the tailings storage facility.

STAGE 2 OPEN PIT FEASIBILITY STUDY

Highlights (all amounts are stated in United States dollars):

- The project development consists of a nominal 70,000 ton-per-day open pit mining and milling operation;

- The open pit proven and probable mineral reserves increased from 3.2 to 4.1 billion pounds of copper reflecting a 29% increase. The current mineral reserves for the precious metals are 717,530 ounces of gold and 26.7 million ounces of silver. Mineral reserves are based on drill data up to July 2012;

- First production targeted for 2016, with the mine life expanding from 18 to 22 years. The current open pit mine life is based on increased daily throughput of 70,000 ton-per day, up from 60,000 ton-per-day previously;

- The 29% increase in mineral reserves reflects a lower copper price of $2.80 per pound copper used for the current pit design limit, versus $3.00 per pound used in the 2012 mineral reserve. The expansion of the mineral reserves has resulted in a merged North and South open pit. This has had a positive impact on sustaining capital; moving South pit pre-stripping out 4 years and reducing equipment needs;

- Life-of-Mine ("LOM") metal production contained in concentrates totals 3.7 billion pounds of copper - an increase of 29%, 483,476 ounces of gold and 15.0 million ounces of silver;

- Average annual copper production in concentrates (amounts reflect periods of full production):

Years 1 to 5:	221 million pounds per year
Years 1 to 10:	197 million pounds per year

- Average annual gold and silver production in concentrates (amounts reflect periods of full production):

Years 1 to 5:	24,089 ozs of gold & 849,300 ozs of silver per year
Years 1 to 10:	23,320 ozs of gold & 808,870 ozs of silver per year

- Initial capital costs are estimated to be $926 million including contingencies, excluding working capital of $23 million;

- LOM site operating costs are $9.94 per ton of ore-milled; copper production costs net of gold and silver credits are:

Years 1 to 5:	$1.58 per pound of copper
Years 1 to 10:	$1.69 per pound of copper

- Summary of Stage 2 Economic Results:

	Base Case	Alternate Case (1)	Alternate Case (2)
	US$ Millions	US$ Millions	US$ Millions
Cumulative pre-tax cash-flow	$3,233	$2,243	$4,594
NPV@ 5%, pre-tax	**$1,524**	**$1,124**	**$2,314**
NPV@ 8%, pre-tax	$961	$733	$1,557
Cumulative after-tax cash-flow	$2,606	$1,851	$3,612
NPV@ 5%, after-tax	**$1,196**	**$888**	**$1,784**
NPV@ 8%, after-tax	$726	$550	$1,172
Average annual operating cash-flow (Years 1 to 5)	**$346**	**$368**	**$426**
Internal rate of return, pre-tax after tax	20.2%	20.0%	26.4%
Internal rate of return, after-tax after tax	17.9%	17.4%	22.9%
Payback pre-tax (years from first production)	4.0	3.7	3.0
Payback after-tax (years from first production)	4.3	4.1	3.5

Open Pit Metals Production
Projected metals production to the copper concentrate is summarized below.

Description	Units	Years 1-5 Annual Average	Years 1-10 Annual Average	LOM Annual Average	LOM Total
Copper Concentrate	000's Tons/year	434	385	337	7,239
Copper in Concentrate	Million lbs./year	221	197	172	3,692
Copper in Concentrate	000s Tons/year	110.6	98.3	85.9	1,846
Gold in Cu Concentrate	Oz/year	24,089	23,322	22,487	483,476
Silver in Cu Concentrate	Oz/year	849,300	808,870	699,000	15,026,000

Stage 2 Open Pit Capital Costs
The project initial capital costs are estimated at $926.6 million with an accuracy of plus/minus 15% as of September 2013, including a contingency of $46 million. The contingency allowance is calculated based on assessed factors for each of the major Direct and Indirect cost categories. The major direct cost items include North deposit pre-stripping, process plant, tailing storage facility, site infrastructure and offsite rail load-out facility. Indirect costs include such major areas as engineering and procurement, construction management, freight and commissioning, spares inventory, first fills, and owner's costs.

Open Pit Sustaining Capital
LOM sustaining capital totals $758 million, of which $425 million is incurred beyond Year 5, includes development of the South open pit deposit development costs; replacement of, and additions to, surface mobile equipment; lease costs for the initial mining fleet; reclamation costs; and expenditures on the tailings storage facility.

The merging of the North and South pits, along with an expanded North deposit reserve, has produced positive results in mine scheduling. The South deposit pre-stripping has been pushed from year 6 to year 10 and a second in-pit crusher has been eliminated.

Pumpkin Hollow Drilling Program
The Corporation has completed the planned 50,000 meter step out and expansion drilling program. Approximately, 44,000 meters of the program was included in the updated mineral resource filed on October 19, 2012. Subsequently the Corporation has completed 6,400 meters of follow-up and expansion drilling in the North Deposit. This drill program started in late December 2012 and was completed in March of 2013. The program targeted new mineralization discovered at the end of last year's drilling program. The holes are located just outside the current feasibility study open pit limits.

The majority of the 2011 and 2102 resource drill program was focused on expansion and step-out drilling of the North and South deposits. Expanding mineralization in these deposits could have a positive impact on pit designs and project economics:

- The North Deposit continues to have multiple areas of open mineralization. The areas include: the lower stacked mineralization area, the north and northwest areas, and the open mineralization along the eastern and southeastern edge of the deposit. The expansion of mineralization in these areas is expected to have a positive impact on further pit designs as well as increase the resource.
- The South Deposit drilling is focused on expanding mineralization in two areas: along the northern and northeastern boundary of the South Deposit and the area between the North and South pits. Both target areas could affect future pit designs.

Other areas included in the program:

- The East Deposit remains open in several directions. Within the deposit there are several recognized higher grade trends. The trend in the northern part of the deposit while thinning extends to the east and west. The southwest portion of the deposit is also open and contains wide spaced holes with high-grade mineralization. Further drilling will be done from underground once the shaft is completed and drilling stations are established.
- Drilling in the E-2 Deposit is not proposed at present although mineralization extends down dip.
- The BC and eastern targets are located on BLM ground a little over a mile east of the East and E-2 deposits. Detailed ground magnetic surveys have been completed and surface mapping and sampling is ongoing. Skarn altered limestone with visible oxide copper mineralization crop out and is coincident with weak magnetic and IP anomalies.

Limited funds have been budgeted for several other targets within the claim block. The targets require additional geologic data compilation and data review before drill holes can be proposed.

More detailed information can be found in the Corporation's News Releases filed on www.sedar.com.

Pumpkin Hollow Project Expenditures

Project costs capitalized as for the period ended September 30, 2013 and for the year ended June 30, 2013 on the Pumpkin Hollow Copper Development Property consists of the following:

Development Costs (expressed in thousands of United States dollars)			
	Sept 30, 2013	2013 Expenditures Q1	June 30, 2013
Property payments	**$1,916**	$62	$1,854
Advance royalty payments	**900**	150	750
Water rights	**1,068**	47	1,021
Drilling	**36,081**	327	35,754
Geological consulting, exploration & related	**6,959**	179	6,780
Feasibility, engineering & related studies	**17,098**	1,036	16,062
Permits/ environmental	**5,961**	339	5,622
East deposit underground project			
Hoist, head frame, power, & related	**12,654**	527	12,127
Underground access	**23,027**	6,608	16,419
Project administration	**3,778**	771	3,007
	109,442	10,046	99,396
Amortization	**284**	16	268
Stock-based compensation	**3,332**	158	3,174
Total	**$113,058**	**$10,220**	$102,838

All exploration and evaluation costs pre-April 2012 were reclassified to Development costs on April 1, 2012 upon the project being assessed as economically feasible and the Board approving the decision to develop the property.

Three months ended September 30, 2013 Compared to the Three months ended September 30, 2012

For the three months ended September 30, 2013, the Corporation invested $10,220 in the development of the mine compared to the $10,607 invested in 2012. Shaft development continued in the current quarter along with work on the stand alone open pit feasibility study. Compared to the quarter ending September 30, 2012 there was less money spent on permitting given that the permitting for the underground mine was substantially complete.

Feasibility, engineering, & related studies expenses include several different areas such as feasibility studies, geotechnical studies, and hydrological studies. Engineering in the three months ended September 30, 2013 was $1,036 compared to $256 in Q1 2012. The costs in Q1 2013 are primarily for the open pit feasibility study that was discussed in a news release on October 3, 2013.

Permit and environmental costs for the three months ended September 30, 2013 of $339 have decreased from the $966 from September 30, 2012. These costs have decreased significantly given that the all permits were received before September 30, 2013.

During the three months ended September 30, 2013 the Corporation continued shaft sinking for the underground operation and incurred costs of $7,135 during this time frame. For the three months ended September 30, 2013 $7,880 was spent on underground construction and the infrastructure necessary to safely commence with the shaft sinking.

Stock-based compensation charges decreased from the prior year to $158 as the share price was lower at the grant date and fewer options were granted in the current fiscal year.

Administration costs of $771 for the three months ended September 30, 2013 were higher than the $213 for the three months ended September 30, 2012 resulting from the expansion of the support staff at the administration office at the mine site as construction progress continues.

Selected annual information

	Three months ended September 30,	
(Thousands, except per share amounts)	**2013**	**2012**
Net loss	(4,243)	(2,654)
Net loss per share	(0.05)	(0.04)
Total cash and cash equivalents	43,094	48,738
Working capital	42,368	45,040
Total liabilities	42,444	4,393
Total assets	167,206	128,173
Shareholders' equity	124,762	123,780

Summary of Quarterly Results

Selected consolidated financial information for the most recent eight financial quarters is as follows. The Corporation made the transition to IFRS effective July 1, 2010, and as a result, financial information is presented under IFRS:

(In thousands of dollars	2013	2013	2013	2012	2012	2012	2012	2011
except amounts per share)	**Sept 30**	**June 30**	**Mar 31**	**Dec 31**	**Sep 30**	**June 30**	**Mar 31**	**Dec 31**
Working capital	42,368	55,000	73,375	59,390	45,040	51,411	63,128	68,307
Total assets	167,206	168,786	178,781	149,278	128,173	125,854	125,719	124,029
Development property	113,058	102,838	94,110	85,492	77,937	67,330	59,232	53,435
Shareholders' equity	124,762	127,752	138,187	145,430	123,780	122,031	123,255	122,526
Net profit (loss)	(4,243)	(15,638)	(440)	(402)	(2,654)	(697)	(1,366)	(805)
Net profit (loss) per share	(0.05)	(0.18)	(0.01)	(0.01)	(0.04)	(0.01)	(0.02)	(0.01)

For the three months ended September 30, 2013

For the three months ended September 30, 2013 (the "first quarter"), the Corporation had a net loss of $4,243 or $0.05 per share compared to a net loss of $2,654 or $0.04 per share with the corresponding period of 2012. The most significant component for the difference was the $3,349 write down of marketable securities held by the Corporation.

General administrative expenses for the three months ending September 30, 2013 increased from $403 in 2012 to $519 in 2013. Personnel expenses increased in 2013 as the Corporation's activity increased. Director fees and expenses were higher in 2013 resulting from additional board members. Public company expenses were higher in the quarter resulting from additional investor relations charges.

Liquidity and Capital Resources

The Corporation's working capital as at September 30, 2013, was $42,368 compared with a working capital position of $55,000 as at June 30, 2013. The decrease in the Corporation's working capital during the period ended September 30, 2013 is primarily due to the increased spending on shaft sinking during the quarter and the decrease in value of marketable securities.

Working capital available as of September 30, 2013 will be utilized for the sinking of a shaft to provide for underground access to the East deposit, engineering of the concentrator and related facilities and underground development. In addition to the funding available under the Red Kite facility, the Corporation will be required to complete additional funding in order to meet its long-term business objectives.

The August 2011 public offering resulted in net proceeds of approximately $62,770 (C$61,000) which was used in property maintenance costs, expanded step out and geotechnical and metallurgical drilling programs, continuing project permitting costs, shaft sinking and an underground exploration program. As of September 30, 2013, all of the funds have been spent. Additional funds raised through the Red Kite debt financing enable the Corporation to continue the development of the stage one underground project. A comparison about how the Corporation disclosed it was going to use the proceeds in the public offering and how they have been used is contained below. As of September 30, 2013, the Corporation had a cash balance of $43,094.

USE OF PROCEEDS	AMOUNT (USD)	SPENT TO DATE (USD)
Balance of Feasibility Study & Property Maintenance Costs	$7 million	$7 million has been spent to date. The spend was greater than anticipated given that a staged approach is being utilised to develop the property. The open pit feasibility study work has been completed as of October 3, 2013.
Expanded step-out, geotechnical, and metallurgical drilling program on the Property	$10 million	Approximately, $11 million was spent on exploration and drilling. No further drilling is planned until the shaft is sunk.
Continuation of project permitting on the Property	$3 million	The permitting costs are $5 million as lobbying efforts continued; permits were obtained, and work on adding a wilderness component to the land bill pushed permitting costs higher.

Advancing the underground program on the Property, including: • Infrastructure upgrading & mobilization • Engineering & head frame • Hoist & sinking equipment • Sinking costs of 2,000 feet of bare shaft; contractor labour and materials • Initial underground development	 $ 4 million $ 4 million $ 6 million $ 24 million $ 5 million	• Infrastructure upgrades are substantially complete. The $5 million spent included the updating of a power line. • Engineering and head frame costs of $5 million have been incurred to date; a production seized head frame was installed rather than using a temporary one. • Hoist work is substantially complete; charges include costs for the refurbishment of the hoist and hoist engineering costs of approximately $5 million. • Sinking costs of $20 million have been incurred to date. • The initial underground spend of $5 million for mobilization, shaft collar and pre-sinking costs has been completed. In the next fiscal period the primary focus of the Corporation is to advance the shaft sinking. This will be funded by the Red Kite debt financing.
Total	**$63 million**	**$63 million**

Transactions with Related Parties

On October 9, 2012, the Corporation completed the purchase of 46,000,000 common shares of Mercator from Pala in consideration for the issuance of 7,315,000 common shares of the Corporation. The value of the Mercator shares was determined to be $23,969 ($23,460 CAD) plus transaction costs of $186 ($182 CAD) at the time of purchase, based on the quoted market price of Mercator and foreign exchange rate at the time.

The investment in Mercator is classified as an available-for-sale financial asset. Gains and losses recognized when marking the investment to market are recognized in other comprehensive income unless there is objective evidence of impairment.

During the period ended June 30, 2013, the Corporation reviewed the value of its marketable securities for objective evidence of impairment based on both quantitative and qualitative criteria and determined that a write down was required. Accordingly, the Corporation recorded a pre-tax charge of $14,606 (2012 – nil) in the statement of operations for the year ended June 30, 2013 to reflect this write down. The fair value of the Mercator shares at June 30, 2013, based on quoted market price, was $8,280 CAD balance which has been re-valued at the period end exchange rate to $7,872. A further impairment charge was recognized in the quarter ending September 30, 2013 of $3,349 ($3,450 CAD). The fair value of the Mercator shares at September 30, 2013, based on quoted market price, was $4,830 CAD balance which has been re-valued at the period end exchange rate to $4,688.

Pala is considered to be a related party because they hold more than 20% of Nevada Copper shares and have two executives on the Corporation's Board of Directors as at September 30, 2013. The accounting treatment of the transaction does not change because it is a related party transaction. The marketable securities are valued at fair value at each period end.

As of September 30, 2013, accounts payable and accrued liabilities include director fees and expenses payable of $78 (June 30, 2013 - $55).

The Corporation has management agreements with certain members of senior management. In the event that there is a change of control, the Corporation is committed to pay severance payments ranging from one to three years of salary.

Related party transactions are recorded at the amount paid or received as established by contract or as agreed upon by the Corporation and the related party.

Commitments

Effective May 4, 2006, the Corporation entered into an Option Agreement to acquire a ten-year lease for mining rights (the “Lease”) to the Pumpkin Hollow Copper Development Property. The initial lease expires May 4, 2016. The Corporation may extend the Lease for up to three additional terms of ten years each, subject to performing continuous mining activities, payment of advance royalty payments of at least $3,000 in the first ten-year term and payment of production royalties and minimum royalty payments of $10,000 in each subsequent ten-year term.

Under the terms of the Lease, the Corporation was required to make the following lease payments, all of which have been paid:

Due Date	**Amount**	
May 4, 2007	$ 75	Paid
May 4, 2008	100	Paid
May 4, 2009	125	Paid
May 4, 2010	150	Paid
May 4, 2011	150	Paid
	$ 600	

After May 4, 2011, the Corporation is required to pay advance royalty payments of $600 annually until the first expiry date of the Lease on May 4, 2016 to a total of $3,000. Quarterly payments of $150 are required. In July 2013, the sixth $150 payment was made.

The Corporation was obligated to make exploration and development expenditures on the Property of at least $4,000 during the first three years of the Lease, with expenditures of at least $500 each year, and an additional $4,000 during the 4th through 6th years of the Lease, with expenditures of at least $500 each year. The Corporation fully satisfied these expenditure obligations by 2008.

Pursuant to the First Amendment to Lease Agreement to the Lease dated April 10, 2008, the Corporation agreed to acquire from the optionor of the Lease, certain water rights to consume a maximum of 724 acre feet of water per year for its mining operations on the Property in exchange for making 80 quarterly payments payable over a period of 20 years with $47 each from July 1, 2008 to April 1, 2028. The first Amendment to the Lease Agreement also contains provisions allowing the Corporation to accelerate and reduce the payments required.

In August of 2009, the Corporation entered into an agreement with the City of Yerington, Nevada to reserve 2,000 acre feet of water per year for a term of 30 years. As consideration the Corporation will pay to the City of Yerington annual reservation fees of $50 which reverts to user. On July 25, 2011, the Corporation amended its water service agreement to include additional water capacity of 1,500 acre feet of water under the same terms of the initial agreement for an additional annual fee of $38. The City of Yerington does have the right to terminate up to 500 acre feet in increments of 100 acre feet upon nine months’ notice and the right to terminate up to 1,000 acre feet in increments of 100 acre feet upon one year’s notice.

The Corporation has entered into a sublease for its corporate offices until November 30, 2013. The sublease payments are payable monthly and include a proportionate share of the operating expenses. The Corporation has entered into a new five year lease agreement for the same offices commencing December 2013 once the sublease expires.

The Corporation also entered into management agreements with certain members of senior management as noted in Transactions with Related Parties. In the event that there is a change of control, the Corporation is committed to pay severance payments equivalent of one to three years of salary.

The following table sets forth the Corporation's known contractual obligations as at September 30, 2013:

	Payments due by period			
Contractual obligations	Total	1 year	2-3 years	4-5 years
Lease obligation – payment on Pumpkin Hollow Property *(i)*	$1,650	$600	$1,050	$-
First amendment to lease – payment of water rights on property *(ii)*	1,990	189	378	1,423
City of Yerington – payment of advanced water service payments *(iii)*	438	88	175	175
Accounts payable and accrued liabilities	5,715	5,715	-	-
Long term debt	37,308	-	11,659	25,649
Total USD obligations	$47,101	$6,592	$13,262	$27,247
	CAD	CAD	CAD	CAD
Office lease	$1,149	$217	$440	$492
Total obligations $CAD	$1,149	$217	$440	$492

i. These are advance royalty payments of $600 annually payable quarterly (see previous section).
ii. The commitment in the table above is the obligation if the Corporation does not renew the Pumpkin Hollow property lease. The Corporation can pay quarterly instalments to the lessor if the lease is renewed. See above for details of the payment schedule.
iii. The commitment in the table is the obligation by the Corporation to the City of Yerington for reservation fees. See previous section for details of the payment schedule.

The Corporation has entered into certain construction and engineering contracts relating to the construction of the underground shaft. Worked incurred on these contracts will be billed monthly and therefore are not listed as commitments.

Off-Balance Sheet Arrangements
The Corporation has no Off-Balance Sheet arrangements that are not disclosed in the Commitment section above.

Disclosure Controls and Procedures and Internal Controls over Financial Reporting
The Chief Executive Officer (the "CEO"), and the Chief Financial Officer (the "CFO") of the Corporation are responsible for establishing and maintaining the Corporation's disclosure controls and procedures ("DCP") including adherence to the Disclosure Policy adopted by the Corporation. The Disclosure Policy requires all staff to keep senior management fully apprised of all material information affecting the Corporation so that they may evaluate and discuss this information and determine the appropriateness and timing for public release.

The CEO and the CFO are also responsible for the design of internal controls over financial reporting ("ICFR"). The fundamental issue is ensuring all transactions are properly authorized and identified and entered into a well designed, robust and clearly understood accounting system on a timely basis to minimize risk of inaccuracy, failure to fairly reflect transactions, failure to fairly record transactions necessary to present financial statements in accordance with IFRS, unauthorized receipts and expenditures, or the inability to provide assurance that unauthorized acquisitions or dispositions of assets can be detected. The relatively small size of the Corporation makes the identification and authorization process relatively efficient and a process for reviewing ICFR has been developed. To the extent possible given the Corporation's small size, the internal control procedures provide for separation of duties for receiving, approving, coding and handling of invoices, entering transactions into the accounts, writing checks and wire requests and also require two signers on all payments.

The CEO and CFO evaluated the effectiveness of the Corporation's DCP and ICFR as required by National Instrument 52-109 issued by the Canadian Securities Administrators. They concluded that as of September 30, 2013, the Corporation's design and operation of its DCP and ICFR were effective in providing reasonable assurance that material information regarding this report, and the unaudited condensed interim consolidated financial statements and other disclosures was made known to them on a timely basis and reported as required and that the financial statements present fairly, in all material aspects, the financial condition, results of operations and cash flows of the Corporation as of the period ending September 30, 2013. The CEO and CFO also concluded that no material weaknesses existed in the design of the ICFR.

The Corporation continually reviews and enhances its system of controls and procedures. However, because of the inherent limitation in all control system, management acknowledges that ICFR will not prevent or detect all misstatements due to error or fraud**.**

Critical Accounting Estimates

The preparation of financial statements in accordance with IFRS requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingencies at the date of the financial statements and the reported amounts of revenues and expenses during the reporting periods. Although these estimates are based on management's expectations for the likely outcome, timing and amounts of events or transactions, actual results could differ from those estimates. Areas requiring the use of management estimates include the determination assumptions used in valuing stock based compensation, valuation of and the determination of the remaining life of mineral property, plant and equipment, estimating future asset retirement obligations and estimating accrued liabilities.

The following are areas where significant estimations or where measurements are uncertain are as follows:

i) Mineral property assets

The measurement and impairment of mineral properties are based on various judgments and estimates. These include the technical and commercial feasibility of these properties, which incorporates various assumptions for mineral reserves and/or resources, future mineral prices and operating and capital expenditures for the properties.

ii) Taxation

Tax provisions are recognized to the extent that it is probable that there will be future outflow of funds to a taxation authority. Such provisions often require judgment on the treatment of certain taxation matters that may not have been reported to or assessed by the taxation authority at the date of these financial statements. Differences in judgment by the taxation authority could result in changes to actual taxes payable by the Corporation.

Deferred tax assets are recognized to the extent that certain taxable losses or deferred expenditures will be utilized by the Corporation to reduce future taxes payable. The amount of deferred tax assets recognized, if any is based on objective evidence that the Corporation will generate sufficient future taxable income to utilize these deferred assets, as well as the expected future tax rates that will apply to these assets.

Changes to the Corporation's ability to generate sufficient taxable income or changes to enacted tax rates could result in the recognition of deferred tax assets.

iii) Stock-based compensation

The Corporation uses the Black-Scholes option pricing model to determine the fair value of stock options and share purchase warrants granted. This model requires management to estimate the volatility of the Corporation's future share price, expected lives of stock options and future dividend yields. Consequently, there is significant measurement uncertainty in the stock-based compensation expense reported.

Risk Factors

- ***The business of exploration for minerals and mining involves a high degree of risk, as few properties that are explored are ultimately developed into producing mines.***
  Mineral exploration is a speculative business, characterized by a number of significant risks including, among other things, unprofitable efforts resulting not only from the failure to discover mineral deposits but from finding mineral deposits which, though present, are insufficient in quantity and quality to return a profit from production. The marketability of minerals acquired or discovered by the Corporation may be affected by numerous factors which are beyond the control of the Corporation and which cannot be accurately predicted, such as market fluctuations, the proximity and capacity of mining facilities, mineral markets and processing

equipment, and such other factors as government regulations, including regulations relating to royalties, allowable production, importing and exporting of minerals, and environmental protection, any of which could result in the Corporation not receiving an adequate return on invested capital.

- ***There are significant risks associated with exploration and development activities including industrial accidents, flooding, environmental hazards, technical problems and labour disputes which could materially adversely affect future mining operations and the Corporation's financial position.***
  There is no certainty that the expenditures made or to be made by the Corporation in the exploration of its properties will result in discoveries of mineralized material in commercially viable quantities. Most exploration projects do not result in the discovery of commercially mineable ore deposits. Mining operations generally involve a high degree of risk which even a combination of experience, knowledge and careful evaluation may not be able to overcome. The business of mining is subject to a variety of risks such as industrial accidents, flooding, environmental hazards such as fires, technical failures, the ability to attract or train qualified mining personnel, labour disputes and other accidents at the mine facilities. Such occurrences, against which the Corporation cannot or may elect not to insure, may delay production, increase production costs or result in liability. The payment of such liabilities may have a material adverse effect on the Corporation's financial position.

- ***Marketability of natural resources which may be discovered by the Corporation will be affected by numerous factors beyond its control.***
  The mining industry in general is intensely competitive and there is no assurance that, even if commercial quantities of mineral resources are discovered, a profitable market will exist for the sale of same. Factors beyond the control of the Corporation may affect the marketability of any mineral occurrences discovered. The price of minerals has experienced volatile and significant price movements over short periods of time, and is affected by numerous factors beyond the control of the Corporation, including international economic and political trends, expectations of inflation, currency exchange fluctuations (specifically, the United States dollar relative to the Canadian dollar and other currencies), interest rates and global or regional consumption patterns, speculative activities and increased production due to improved mining and production methods.

- ***If the Corporation's programs are successful, additional funds will be required for the development of an economic ore body and to place it into commercial production.***
  As a mining company in the development stage, the future ability of the Corporation to conduct development will be affected principally by its ability to raise adequate amounts of capital through equity financings, debt financings, joint venturing of projects and other means. In turn, the Corporation's ability to raise such funding depends in part upon the market's perception of its management and properties, but to a great degree upon the mineral prices and the marketability of securities of development mining companies.

  The development of any ore deposits found on the Corporation's mineral properties depends upon the Corporation's ability to obtain financing through any or all of equity financing, debt financing, the joint venturing of projects, or other means. There is no guarantee that additional funds will be available on terms acceptable to the Corporation or at all. In the event that the Corporation's operating cash flow is negative this may have a material adverse effect on the Corporation and its stock price.

- ***Title Matters***
  In those jurisdictions where the Corporation has property interests, the Corporation makes a search of mining records in accordance with mining industry practices to confirm satisfactory title to properties in which it holds or intends to acquire an interest, but does not obtain title insurance with respect to such properties. The possibility exists that title to one or more of its properties, particularly title to undeveloped properties, might be defective because of errors or omissions in the chain of title, including defects in conveyances and defects in locating or maintaining such claims, or concessions. The ownership and validity of mining claims and concessions are often uncertain and may be contested. There is, however, no guarantee that title to the Corporation's properties and concessions will not be challenged or impugned in the future. The properties may be subject to prior unregistered agreements or transfers, and title may be affected by undetected defects.

- ***The Corporation has a lack of operating history and has no history of earnings.***
  The Corporation and its predecessor companies have no history of earnings or positive operating cash flows. The Corporation has paid no dividends on its shares since incorporation and does not anticipate doing so in the

foreseeable future. The only present source of funds available to the Corporation is through the sale of its equity shares or by way of debt facilities. While the Corporation may generate additional working capital through the operation, development, sale or possible syndication of its properties, there is no assurance that any such funds will be generated.

- ***Currency risk***

  The Corporation is exposed to currency fluctuations in the acquisition of currencies other than the USD reporting currency. The Corporation holds balances in cash and cash equivalents, accounts payable, accrued liabilities and leases in CAD and is therefore exposed to gain or losses on foreign exchange.

- ***The Corporation's activities on the Pumpkin Hollow Property are subject to environmental regulations.***

  All phases of the Corporation's operations are subject to environmental regulation in the various jurisdictions in which it operates. Environmental legislation is evolving in a manner which will require stricter standards and enforcement, increased fines and penalties for non-compliance, more stringent environmental assessments of proposed projects and a heightened degree of responsibility for companies and their officers, directors and employees. There is no assurance that future changes in environmental regulation, if any, will not adversely affect the Corporation's operations, or its ability to develop its properties economically. Before production may commence on any property, the Corporation must obtain regulatory and environmental approvals and permits. While the Corporation has the key permits necessary to advance the Stage 1 underground project, there is no assurance such approvals and permits will be obtained on a timely basis, if at all. Compliance with environmental and other regulations may reduce profitability, or preclude economic development of a property entirely.

- ***The Corporation is in competition with other mining companies that have greater resources and experience.***

  The resource industry is intensely competitive in all of its phases, and the Corporation competes with many companies possessing greater financial resources and technical facilities. Competition could adversely affect the Corporation's ability to acquire suitable producing properties or prospects for exploration in the future.

- ***The Corporation is dependent on key personnel and the absence of any of these individuals could result in a significantly negative effect on the Corporation.***

  The success of the Corporation and its ability to continue to carry on operations is dependent upon its ability to retain the services of certain key personnel. The loss of their services to the Corporation may have a material adverse effect on the Corporation. The Corporation does not presently have "key person" life insurance for any of its officers.

- ***Some of the directors of the Corporation are involved with other mineral resource companies and may have a conflict of interest in negotiations on a project that is also of interest to the Corporation.***

  Certain of the directors of the Corporation are directors of other mineral resource companies and, to the extent that such other companies may be interested in a project also of interest to the Corporation, or may in the future participate in one or more ventures in which the Corporation participates, such directors may have a conflict of interest in negotiating and concluding terms respecting such other projects or the extent of such participation. In the event that such a conflict of interest arises, at a meeting of the directors of the Corporation, a director who has such a conflict will abstain from voting for or against the approval of such acquisition or participation. In the appropriate cases, the Corporation will establish a special committee of independent directors to review a matter in which several directors, or management, may have a conflict. From time to time several companies may participate in the acquisition, exploration and development of natural resource properties thereby allowing for their participation in larger programs, permitting involvement in a greater number of programs and reducing financial exposure in respect of any one program

- ***Legal Proceedings against Foreign Directors.***

  The Corporation is incorporated under the laws of British Columbia, Canada, and some of the Corporation's directors and officers are residents of Canada. Consequently, it may be difficult for United States investors to affect service of process within the United States upon the Corporation or upon its directors or officers, or to realize in the United States upon judgments of United States courts predicated upon civil liabilities under the United States Securities Exchange Act of 1934, as amended. Furthermore, it may be difficult for investors to enforce judgments of U.S. courts based on civil liability provisions of the U.S. federal securities laws in a foreign court against the Corporation or any of the Corporation's non-U.S. resident officers or directors.

- ***Shareholder Dilution***
  It is possible that some of the additional capital required by the Corporation may be raised through the issuance of additional equity securities, resulting in dilution to the Corporation's shareholders.

- ***Share price risk***
  The market price of a publicly traded stock is affected by many variables not directly related to the success of the Corporation, including the market for all resource sector shares, the breadth of the public market for the stock, and the attractiveness of alternative investments. The effect of these and other factors on the market price of the common shares of the Corporation on the exchanges on which the common shares are listed suggests that the share price will be volatile. In the previous eight quarters, between October 1, 2011 and September 30, 2013, the Corporation's shares traded in a range between CAD$1.85 and CAD$5.61.

- ***Insurance risks***
  Although the Corporation maintains insurance to protect against certain risks in such amounts as it considers to be reasonable, its insurance will not cover all the potential risks associated with a mining company's operations. Nevada Copper may also be unable to maintain insurance to cover these risks at economically feasible premiums. Insurance coverage may not continue to be available or may not be adequate to cover any resulting liability.

Outlook
The Corporation will continue to focus its development efforts in the United States for purposes of the exploring and developing copper projects, in particular Pumpkin Hollow, and acquiring additional copper properties, should opportunities to do so present themselves.

As a development stage company the future liquidity of the Corporation will be affected principally by the level of its development expenditures and by its ability to raise an adequate level of capital through the capital markets. The Corporation will be required to complete additional funding in order to meet its long-term business objectives. The Corporation will continue to evaluate its funding requirements on a go forward basis in an effort to meet its future development and growth initiatives.

Share Data
Capital Structure as of November 5, 2013:

Common shares issued and outstanding:	80,501,458
Total stock options outstanding:	7,370,000
Total warrants outstanding:	nil

Subsequent Events

During October 2013 340,000 options were cancelled.

During October 2013, 200,000 options were granted to an officer of the Corporation exercisable at C$2.00 per share.

On October 9, 2013 the Corporation received the second tranche of funding from Red Kite of $15,000.

Forward-Looking Statements
Certain of the statements made and information contained herein may contain forward-looking information within the meaning of applicable Canadian securities laws. Such forward-looking statements and forward-looking information include, but are not limited to, statements concerning: the Corporation's plans at the Pumpkin Hollow Project; the assumptions in the financial analysis prepared in connection with the Preliminary Economic Assessment (the "PEA") reports and FS on the Pumpkin Hollow Project; the timing of granting of key permits, , estimated metal production and the timing thereof; any metal pricing, capital and operating and cash flow estimates contained in the PEA and FS; and the access to financing and appropriate equipment and sufficient labour. Forward-looking statements or information include statements regarding the expectations and beliefs of management. Often, but not always, forward-looking statements and forward-looking information can be identified by the use of words such as "plans", "expects", "is expected", "anticipated", "is targeted", "budget", "scheduled", "estimates", "forecasts", "intends", "anticipates", or "believes" or the negatives thereof or variations of such words and phrases or statements that certain actions, events or results "may", "could", "would", "might" or "will" be taken, occur or be achieved. Forward-looking statements or information include, but are not limited to, statements or information with respect to

known or unknown risks, uncertainties and other factors which may cause the actual industry results, to be materially different from any future results, performance or achievements expressed or implied by such forward-looking statements or information.

Forward-looking statements or information are subject to a variety of risks and uncertainties which could cause actual events or results to differ from those reflected in the forward-looking statements or information, including, without limitation, risks and uncertainties relating to: history of losses; requirements for additional capital; dilution; loss of its material properties; interest rates increase; global economy; no history of production; future metals price fluctuations, speculative nature of exploration activities; periodic interruptions to exploration, development and mining activities; environmental hazards and liability; industrial accidents; failure of processing and mining equipment to perform as expected; labour disputes; supply problems; uncertainty of production and cost estimates; the interpretation of drill results and the estimation of mineral resources and reserves; legal and regulatory proceedings and community actions; title matters; regulatory restrictions; permitting and licensing; volatility of the market price of Common Shares; insurance; competition; hedging activities; currency fluctuations; loss of key employees; as well as those factors discussed in the section entitled "Risk Factors" in this MD&A and the Corporation's Annual Information Form dated September 19, 2013. Should one or more of these risks and uncertainties materialize, or should underlying assumptions prove incorrect, actual results may vary materially from those described in forward-looking statements or information. Accordingly, readers are advised not to place undue reliance on forward-looking statements or information. The Corporation disclaims any intent or obligation to update forward-looking statements or information except as required by law, and you are referred to the full discussion of the Corporation's business contained in the Corporation's reports filed with the securities regulatory authorities in Canada.

NEVADA COPPER CORP.

Condensed Consolidated Interim Financial Statements
For the three months ended September 30, 2013 and 2012

NOTICE OF NO AUDITOR REVIEW OF INTERIM FINANCIAL STATEMENTS

Under National Instrument 51-102, “Continuous Disclosure Obligations”, Part 4, subsection 4.3(3)(a), if an auditor has not performed a review of the interim financial statements, they must be accompanied by a notice indicating that the financial statements have not been reviewed by an auditor.

The accompanying unaudited condensed consolidated interim financial statements of the Corporation have been prepared by management and approved by the Audit Committee and the Board of Directors of the Corporation.

The Corporation’s independent auditors have not performed a review of these consolidated financial statements in accordance with the standards established by the Canadian Institute of Chartered Accountants for a review of interim financial statements by an entity’s auditors.

The accompanying notes are an integral part of these condensed consolidated interim financial statements.

1. Nature of operations:

Nevada Copper Corp. (the "Corporation" or "Nevada Copper"), is a development stage mining company engaged in the development of the Pumpkin Hollow Copper Project based in Nevada. The recoverability of amounts capitalized is dependent upon maintaining the lease and titles to the properties, obtaining the necessary financing and permits to complete the development of these properties and the attainment of future profitable production. The amounts capitalized as development costs represent costs to date, and do not necessarily represent present or future values.

Nevada Copper was incorporated on June 16, 1999 under the Business Corporations Act of the Yukon as African Venture Corporation and changed its name to Astron Resources Corporation on July 26, 1999, and subsequently to Nevada Copper Corp. on November 16, 2006. The Corporation's common shares are listed on the Toronto Stock Exchange ("TSX") under the NCU symbol. The Corporation's head office is located at Suite 1238, 200 Granville Street, Vancouver BC, Canada, V6C 1S4 and its registered and records office is located at Suite 3350, 1055 Dunsmuir Street, Vancouver, BC, Canada, V7X 1L2.

These consolidated financial statements have been prepared on a going concern basis. The Corporation will be required to complete additional funding in order to meet its long-term business objectives.

2. Basis of presentation and significant accounting policies:

These condensed consolidated interim financial statements, including comparatives, have been prepared in accordance with International Accounting Standards ("IAS") 34, Interim Financial Reporting using accounting policies consistent with IFRS issued by the International Accounting Standards Board ("IASB") and interpretations of the IFRS Interpretations Committee ("IFRIC"). These condensed consolidated interim financial statements have been prepared on the basis of accounting policies and methods of computation consistent with those applied in and should be read in conjunction with the Corporation's June 30, 2013 consolidated financial statements.

All financial information in these consolidated financial statements is presented in United States dollars ("USD"), unless otherwise stated. References to CAD are to Canadian dollars ("CAD").

These condensed consolidated interim financial statements were approved for issue by the Board of Directors on November 5, 2013.

3. Recent accounting pronouncements:

The IASB issued a number of new and revised accounting standards that are effective for annual periods beginning on or after January 1, 2013. These standards include the following:

(i) IFRS 10, Consolidated Financial Statements;
(ii) IFRS 11, Joint Arrangements;
(iii) IFRS 12, Disclosure of Interests in Other Entities;
(iv) IFRS 13, Fair Value Measurement;
(v) Amended IAS 27, Separate Financial Statements;
(vi) Amended IAS 28, Investments in Associates and Joint Ventures; and
(vii) IFRIC 20, Stripping Costs in the Production Phase of a Surface Mine.

3. Recent accounting pronouncements (continued):

The Corporation assessed the impact of the above standards and noted that there was no impact of IFRS 10, 11, 12 and IFRIC 20 on the Corporation's financial statements.

IFRS 13 – Fair Value Measurement ("IFRS 13") defines fair value and sets out a single framework for measuring fair value which is applicable to all IFRSs that require or permit fair value measurements or disclosures about fair value measurements. IFRS 13 requires that when using a valuation technique to measure fair value, the use of relevant observable inputs should be maximized while unobservable inputs should be minimized. The Corporation has applied IFRS 13 on a prospective basis, commencing July 1, 2013.

Amendments to IAS 1 – Presentation of Financial Statements ("IAS 1"), effective for annual periods beginning on or after July 1, 2012, require an entity to group items presented in the statement of other comprehensive income on the basis of whether they may be reclassified to profit or loss subsequent to initial recognition. For those items presented before tax, the amendments to IAS 1 also require that the tax related to the two separate groups be presented separately.

In December 2011, the IASB amended IFRS 9, Financial Instruments, which is effective for periods beginning on or after January 1, 2015. These revised accounting standards have not yet been adopted by Nevada Copper, and the Corporation has not yet completed the process of assessing the impact that it will have on its financial statements, or whether to early adopt any of the new requirements.

4. Marketable securities:

On October 9, 2012, the Corporation completed the purchase of 46,000,000 common shares of Mercator Minerals Ltd. ("Mercator"), representing, at that time, approximately 17.8% of the issued and outstanding common shares of Mercator, from Pala Investments Limited in consideration for the issuance of 7,315,000 common shares of the Corporation. The value of the Mercator shares was determined to be $23,969 ($23,460 CAD) plus transaction costs of $186 ($182 CAD) at the time of purchase.

During the period ended June 30, 2013, the Corporation reviewed the value of its marketable securities for objective evidence of impairment based on both quantitative and qualitative criteria and determined that impairment was required. Accordingly, the Corporation recorded a pre-tax charge of $14,606 ($15,362 CAD) (2012 – nil) in profit or loss for the year ended June 30, 2013 to reflect this write down. The value of the Mercator shares at June 30, 2013 was $8,280 CAD which was then re-valued at the period end exchange rate to $7,872.

In consideration of the impairment charge realized in the year ending June 30, 2013 losses are now recognized in the statement of operations when marking the investment to market. During the three month period ending September 30, 2013 $3,349 ($3,450 CAD) of loss on marketable securities was incurred. The $4,830 CAD balance is then re-valued at the period end spot rate to $4,688.

(Expressed in thousands of United States dollars, except share amounts)

5. Mineral properties, plant and equipment:

	Development Costs	Plant & Equipment	Total
Cost:			
As at June 30, 2013	$102,838	$700	$103,538
Additions	10,220	59	10,279
As at September 30, 2013	113,058	759	**113,817**
Accumulated depreciation:			
As at June 30, 2013	-	270	270
Additions	-	16	16
As at September 30, 2013	-	286	**286**
Net book value:			
As at June 30, 2013	102,838	430	103,268
As at September 30, 2013	$113,058	$473	$113,531

Pumpkin Hollow Copper Development Property:

On March 1, 2005, the Corporation entered into an Option Agreement to acquire a ten-year lease for mining rights (the "Lease"), effective May 4, 2006 and expiring May 4, 2016, for the Pumpkin Hollow Copper Development Property (the "Property") located in north-western Nevada, United States, approximately one hundred miles southeast of Reno. The Property is located within a contiguous 22 square mile land package comprised of patented and unpatented claims. During the 2006 fiscal year, the Corporation paid $80 to the optionor in full payment for the option and obtained a 100% interest in the Property pursuant to the lease terms.

Subsequent to May 4, 2011, the Corporation is required to pay advance royalty payments of $600 annually until the first expiry date of the Lease on May 4, 2016 to a total of $3,000. Quarterly lease payments of $150 are due and paid commencing in April 2012. The Corporation is current with all required Lease payments and advance royalty payments.

The Property is subject to a sliding scale royalty of 4% to 6% on the net smelter return of copper with the maximum royalty to be paid when copper is over $2.00 per pound. In addition a 5% royalty is due on the net smelter return value of products other than copper. The cumulative advance royalty payments will offset any future royalty obligations.

(Expressed in thousands of United States dollars, except share amounts)

5. Mineral properties, plant and equipment (continued):

The Corporation was obligated to make exploration and development expenditures on the Property of at least $4,000 during the first three years of the Lease, with expenditures of at least $500 each year, and an additional $4,000 during the 4th through 6th years of the Lease, with expenditures of at least $500 each year. During 2008, and in less than three years, the Corporation satisfied these obligations.

The Corporation may extend the Lease for up to three additional terms of ten years each, subject to performing continuous mining activities, payment of advance royalty payments of at least $3,000 in the first ten-year term and payment of production royalties and minimum royalty payments of $10,000 in each subsequent ten-year term.

Project costs capitalized as for the period ended September 30, 2013 and for the year ended June 30, 2013 on the Property consists of the following:

	Development Costs		
	September 30, 2013	2013 Expenditures	June 30, 2013
Property payments	**$1,916**	$62	$1,854
Advance royalty payments	**900**	150	750
Water rights	**1,068**	47	1,021
Drilling	**36,081**	327	35,754
Geological consulting, exploration & related	**6,959**	179	6,780
Feasibility, engineering & related studies	**17,098**	1,036	16,062
Permits/ environmental	**5,961**	339	5,622
East deposit underground project			
Hoist, head frame, power, & related	**12,654**	527	12,127
Underground access	**23,027**	6,608	16,419
Project administration	**3,778**	771	3,007
	109,442	10,046	99,396
Amortization	**284**	16	268
Stock-based compensation	**3,332**	158	3,174
Total	**$113,058**	$10,220	$102,838

All exploration and evaluation costs pre-April 2012 were reclassified to development costs on April 1, 2012 upon the project being assessed as economically feasible and management approving the decision to develop the Property.

Pumpkin Hollow Copper Development Property – Water Rights:

Pursuant to the First Amendment to the Lease dated April 10, 2008, the Corporation agreed to acquire from the optionor of the Lease, certain water rights to consume a maximum of 724 acre feet of water for its mining operations on the Property in exchange for making 80 quarterly payments of $47 each payable over a period of 20 years from July 1, 2008 to April 1, 2028. The First Amendment to the Lease also contains provisions allowing the Corporation to accelerate and reduce the payments required.

In August of 2009, the Corporation entered into an agreement with the City of Yerington, Nevada to reserve 2,000 acre feet of water for a term of 30 years. As consideration, the Corporation will pay to the City of Yerington annual reservation fees of $50 which revert to user fees based on usage at $0.10 per acre foot for year 1 to year 15; $0.125 for year 16 to year 20; $0.150 for year 21 to year 25; and $0.175 per acre foot for year 26 to year 30.

(Expressed in thousands of United States dollars, except share amounts)

5. Mineral properties, plant and equipment (continued):

On July 25, 2011, the Corporation amended its agreement with the City of Yerington, to increase its annual reserve from 2,000 acre feet of water to 3,500 acre feet of water under the same terms of the original agreement. As consideration, the Corporation will pay to the City of Yerington additional annual reservation fees of $38 (note 9 (a) (iii)). The Corporation has total water rights under agreements amounting to 4,224 acre feet of water per year. The costs of the leases have been capitalized to exploration and evaluation assets and development costs as incurred.

Plant and equipment:

	Building	Equipment	Mobile Equipment	Computer Equipment	Total
Cost:					
As at June 30, 2013	$474	$80	$65	$81	$700
Additions	6	-	-	53	59
As at September 30, 2013	480	80	65	134	759
Accumulated depreciation:					
As at June 30, 2013	114	63	54	39	270
Additions	11	2	2	1	16
As at September 30, 2013	125	65	56	40	286
Net book value:					
As at June 30, 2013	360	17	11	42	430
As at September 30, 2013	**$355**	**$15**	**$9**	**$94**	**$473**

During the three month period ended September 30, 2013, the Corporation added $59 in plant and equipment (2012 - $nil) and had amortization of plant and equipment of $16 (2012 - $18), of which $16 (2012 - $18) was included in capitalized mineral property expenditures.

6. Long term debt:

On March 28, 2013, the Corporation negotiated a US$200 million loan facility with Red Kite (the “Loan”). The Loan is comprised of four tranches - Tranche A for $36 million, which was received on March 28, 2013, Tranche B for $15 million which is subject to the receipt of State permits, Tranche C for $10 million which is subject to completion of Yerington land transfer, and Tranche D which is based on technical milestones, namely an acceptable mine plan, for $139 million or $149 million depending whether or not Tranche C was received.

Amounts advanced under the Loan bear interest at the greater of three-month LIBOR and 1%, plus 600 basis points. The Loan was subject to a 3% loan origination fee, which was paid on March 28, 2013.

The Loan is to be repaid by the end of the first quarter of 2019. Interest and principal shall be payable on a quarterly basis with the first interest and principal repayment due April 2015. The Loan can be repaid without penalty at any time prior to maturity.

The Loan is carried at amortised cost on the statement of financial position. The Corporation incurred $6,522 of transaction costs, including the 3% origination fee, relating to the Loan for a net balance of $29,478. A portion of the transaction costs were recognised as part of the Loan based on the amount drawn down out of the total amount available from the facility or 18% as at September 30, 2013. This portion was initially $1,174 but it increased to $1,184 at September 30, 2013 relating to the 18% portion, $10, recognisable against the Loan.

6. Long term debt (continued):

The remainder of the transaction costs have been accounted for as deferred financing costs and will be netted against future tranches when drawn on a pro-rata basis. Transaction costs are recognised to interest expense over the term of the loan using the effective interest rate method. The transaction costs accreted during the period were $25. During the same period $645 of interest was accrued and capitalised to mineral property development costs at an effective interest rate of 8.2%. The deferred financing fees balance at September 30, 2013 is $5,392 and the carrying value of the loan is $36,124.

The Loan is fully and unconditionally guaranteed, on a joint and several basis, by the Corporation's existing and future subsidiaries and secured by all current and future assets of the Corporation. The loan is collateralized against the Corporation's assets, including the shares of the Corporation's subsidiary which holds the Nevada Copper assets.

In addition to, and related to, the Loan, the Corporation also entered into an off-take agreement with Red Kite for the sale of copper concentrates from the underground mine of the eastern deposits. The Corporation will supply Red Kite with the percentage of total copper concentrate production based on the amount advanced to the Corporation through tranches divided by the total available loan. Post Tranche A, and including only this tranche, Red Kite would be entitled to 18% of the Corporation's annual copper concentrates production from the eastern deposits when the Corporation commences commercial production. The off-take agreement includes concentrate pricing based on market terms.

Subsequent to September 30, 2013 the Corporation received tranche B of $15,000 from Red Kite.

7. Related party transactions:

On October 9, 2012, the Corporation completed the purchase of 46,000,000 common shares of Mercator Minerals Ltd. ("Mercator"), from Pala Investments Limited in consideration for the issuance of 7,315,000 common shares of the Corporation. Pala Investments Limited is considered to be a related party because they hold more than 20% of Nevada Copper shares and have two executives on the Corporation's Board of Directors. The marketable securities are valued to fair market at each period end.

The Corporation has entered into management agreements with certain senior officers. In the event that there is a change of control, the Corporation is committed to pay severance payments ranging from one to three years of salary for these senior officers.

As of September 30, 2013, accounts payable and accrued liabilities include director fees and expenses payable of $78 (June 30, 2013 - $55).

Related party transactions are recorded at the amount paid or received as established by contract or as agreed upon by the Corporation and the related party.

(Expressed in thousands of United States dollars, except share amounts)

8. Share capital:

(a) Authorized:

The Corporation is authorized to issue an unlimited number of common shares without par value.

(b) Issued:

On August 2, 2011, the Corporation closed a common share public offering equity financing of C$65 million (the "Financing") with a syndicate of underwriters led by Canaccord Genuity Corp. and Scotia Capital Inc., and including GMP Securities L.P., Cormark Securities Inc., Macquarie Capital Markets Canada Ltd., Paradigm Capital Inc., Desjardins Securities Inc. and M Partners Inc., (collectively, the "Underwriters"). 12,050,000 common shares of the Corporation were issued at a price of C$5.40 per share for gross proceeds of $67,764 (C$65,070). The Underwriters received a cash commission of $3,727 (C$3,579) and 301,250 Broker Warrants exercisable to purchase one common share of the Corporation at a price of C$6.00 per share up to August 2, 2013. Using the Black-Scholes Valuation Model, the warrants were valued at $802,011. Share issue costs including the value of warrants totaled $4,995. These warrants expired on August 2, 2013.

(c) Options:

The Corporation grants incentive stock options as permitted pursuant to the Corporation's Stock Option Plan (the "Plan"), originally approved by the shareholders on November 16, 2007 and re-approved August 27, 2010, which complies with the rules and policies of the TSX. Under the Plan, the aggregate number of common shares which may be subject to option at any one time may not exceed 10% of the issued common shares of the Corporation as of that date including options granted prior to the adoption of the Plan. Options granted may not exceed a term of ten years, and the term will be reduced to one year following the date of death of the Optionee. If the Optionee ceases to be qualified to receive options from the Corporation those options shall immediately expire. All options vest when granted unless otherwise specified by the Board of Directors.

In the period ended September 30, 2013, 775,000 stock options were issued to various officers and employees of the Corporation at an exercise price of CAD $2.35. In the period ended September 30, 2013 a Director of the Corporation received 125,000 options at an exercise price of CAD $2.00.

As of September 30, 2013, the Corporation has stock options outstanding to directors, officers, employees and consultants to acquire an aggregate of 7,510,000 common shares summarized as follows. All of these options vested upon grant except for 549,250 which vest over two years. The outstanding options have a weighted average remaining life of 7.14 years.

	Number of Options	Weighted average exercise price $(CAD)
Outstanding June 30, 2013	6,610,000	$3.54
Granted	900,000	2.30
Exercised	-	-
Outstanding September 30, 2013	**7,510,000**	**3.39**
Exercisable September 30, 2013	**6,960,750**	**$3.38**

During the three month period ended September 30, 2013, under the fair value method, $710 (2012 – $2,489) in share based compensation was recorded for options granted to directors and officers of which $552 (2012 - $2,145) was charged to operations and $158 (2012 – $344) was capitalized to development costs.

(Expressed in thousands of United States dollars, except share amounts)

8. Share capital (continued):

The Corporation uses the Black-Scholes option pricing model to value stock options which requires management to make estimates that are subjective and may not be representative of actual results. Changes in assumptions can materially affect estimates of fair values. For purposes of the calculation, the following weighted average assumptions were used:

	Period ended September 30, 2013	Period ended September 30, 2012
Risk free interest rate	**1.84%**	1.59%
Expected dividend yield	**0%**	0%
Expected stock price volatility	**85%**	90%
Expected life in years	**5**	8
Expected forfeitures	**0%**	0%

The risk free rate of return is the yield on a zero-coupon Canadian Treasury Bill of a term consistent with the assumed option life. The expected volatility is based on the Corporation's historical prices. The expected average option term is the average expected period to exercise, based on the historical activity patterns for each individually vesting tranche. Expected forfeitures are based on historical forfeitures of the Corporation's options.

The following table summarizes the stock options outstanding and exercisable as at September 30, 2013:

	Outstanding		Exercisable	
Exercise price	Number outstanding	Weighted average remaining life (years)	Number outstanding	Weighted average remaining life (years)
$0.75 - $1.00	725,000	4.86	725,000	4.86
$1.01 - $3.74	3,455,000	7.00	2,935,750	7.35
$3.75 - $5.37	3,330,000	7.79	3,300,000	7.78
	7,510,000	**7.14**	**6,960,750**	**7.30**

(d) Warrants:

As of September 30, 2013, the Corporation has nil share purchase warrants outstanding.

	Number of Warrants	Weighted average exercise price (CAD)
Outstanding June 30, 2013	301,250	$6.00
Outstanding September 30, 2013	-	-

(Expressed in thousands of United States dollars, except share amounts)

9. Financial instruments:

(a) Contractual obligations:

The following table sets forth the Corporation's known contractual obligations for the next five fiscal years as at September 30, 2013:

	Payments due by period			
Contractual obligations	Total	1 year	2-3 years	4-5 years
Lease obligation – payment on Pumpkin Hollow Property *(i)*	$1,650	$600	$1,050	$-
First amendment to lease – payment of water rights on property *(ii)*	1,990	189	378	1,423
City of Yerington – payment of advanced water service payments *(iii)*	438	88	175	175
Accounts payable and accrued liabilities	5,715	5,715	-	-
Long term debt	37,308	-	11,659	25,649
Total USD obligations	$47,101	$6,592	$13,262	$27,247
	CAD	CAD	CAD	CAD
Office lease	$1,149	$217	$440	$492
Total obligations $CAD	$1,149	$217	$440	$492

(*i*) See note 5 for renewal terms.

(*ii*) The commitment in the table above is the obligation if the Corporation does not renew the Pumpkin Hollow property lease. The Corporation can pay quarterly installments to the lessor if the lease is renewed. The First Amendment to the Lease contains provisions allowing the Corporation to accelerate and reduce the payments required. This table assumes this acceleration will occur and be paid in the 4-5 year time frame. See note 5 for details of the payment schedule.

(*iii*) The commitment in the table above is the obligation by the Corporation to the City of Yerington for water reservation fees. See note 5 for details of the payment schedule.

10. Management of capital:

The Corporation's objectives of capital management are intended to safeguard the entity's ability to support the Corporation's development and exploration of its mineral properties and support any expansionary plans.

The capital of the Corporation consists of the items included in shareholders' equity and debt obligations. The Corporation manages the capital structure and makes adjustments in light of changes in economic conditions and the risk characteristics of the Corporation's underlying assets.

To effectively manage the entity's capital requirements, the Corporation has in place a planning and budgeting process to help determine the funds required to ensure the Corporation has the appropriate liquidity to meet its objectives. The Corporation may issue new shares or seek debt financing to ensure that there is sufficient working capital to meet its short-term business requirements. The Corporation is not subject to externally imposed capital requirements.

11. Subsequent Events:

During October 2013, 340,000 options were cancelled.

During October 2013, 200,000 options were granted to an officer of the Corporation exercisable at C$2.00 per share.

Subsequent to September 30, 2013 the Corporation received the second tranche of funding from Red Kite of $15,000.
